If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed. If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to the Benchmark Indicator formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with the Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the French government bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is greater than 3 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux - France.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 5 September 2012*
- *Compartment creation date: 21 September 2012*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF MTS 1-3Y FRANCE GOVERNMENT BOND (DR) Compartment shows an evolution of 0.27%* between 31/10/2014 and 30/10/2015 and stands at EUR 101.479 on 30/10/2015, meaning a fund performance of 1.48% since inception.

The fund replicates the performance of the MTS Mid Price France Govt 1-3 y index, listed in euros (EUR), the fund seeks to track the MTS France Government Index (1-3yr).

This index has shown an evolution of 0.41% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MTS Mid Price France Govt 1-3 y index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the MTS Mid Price France Govt 1-3 y index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 2 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

On 30/10/2015, the tracking error reached the level of 0.0100% for the Compartment. The level of the tracking error for the period was of 0.02%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The Board of directors nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The Board of directors nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The Board of directors independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the Board of directors' responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Classes of equities and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Classes of equities and equities of AIF operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the financial manager by delegation's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and financial manager by delegation.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the Board of Directors when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Diversified.

The LYXOR UCITS ETF UNLEVERAGED S&P 500 VIX FUTURES ENHANCED ROLL Compartment (the "Compartment") is an actively management Compartment of the UCITS ETF type.

Terms of determination and allocation of amounts available for distribution:

C-EUR and C-USD equities classes: Capitalisation of all the amounts available for distribution.

Management objective:

The objective of the actively managed Compartment is to obtain variable exposure of up to 50% (the "Target Exposure"), upward or downward, to the S&P500 Vix Futures Enhanced Roll index (the "Index"), while limiting a "value at risk" (VaR) through the use of money-market instruments.

In order to achieve its management objective, the Compartment will be exposed to a Benchmark Portfolio (as defined in the "Investment Strategy" section).

Index:

The active management method described in the "Investment Strategy" section is not compatible with the use of a Benchmark Indicator. Nonetheless, the Benchmark Portfolio is exposed to the Index.

The Index is calculated by S&P:

The index is a defined strategy index calculated by S&P.

The Index provides an exposure, upward or downward, to the evolution of the futures contracts market on the implicit volatility of the S&P 500 index, listed in the CBOE in Chicago. The Index also offers an exposure to the US money market because of the lack of financing for the strategy's implementation.

Methodology:

Listed in US dollars, the S&P 500 index is made up of the 500 main American listed companies.

The Index is calculated in real-time and is available on the S&P site: www.standardandpoors.com.

The performance of the Index is equal to the performance of a basket of futures short-term (maturing in 1 to 2 months) and medium-term (maturing in 3 to 5 months), over the VIX index increased by the aggregate performance of interests of the American treasury (3-month T-Bill). To optimise the performance of the Index, the basket is made up of medium-term futures during calm periods or short-term futures during tense periods, with the switch from one basket to the other resulting, according to the Index methodology, from signals based on the value of the VIX relative to its moving average.

The monitored performance is that of the 3.15 pm in Chicago (GMT-6), listed in USD.

Since the methodology used to calculate the Benchmark Indicator is not based on direct investment in the VIX volatility index but on indirect investment in futures, the Compartment's performance will be affected by the cost of rolling over positions on these futures contracts daily.

This phenomenon could negatively and progressively impact, potentially in a significant manner, the gap between the Compartment's performance and the gross performance on the underlyings of the aforesaid futures, notably in case of long-term investment in the Compartment's equities.

An exhaustive description and the complete methodology for the construction of the Index as well as information on the composition of the Benchmark Indicator are available at the following Internet site: www.spindices.com.

Index publication:

The Index is calculated daily at the 3:15 p.m. closing price in Chicago.

The index is available on Reuters and Bloomberg. Reuters code: .SPVIXETR

Bloomberg code: SPVIXETR

The Benchmark Indicator closing price is available on the Internet site of the Benchmark Indicator sponsor at: www.spindices.com

Index revision:

The Index's composition is revised quarterly, or prior to this, under exceptional circumstances as determined by the Index sponsor and described in the Benchmark Indicator methodology.

The frequency this rebalancing will have an impact on the costs borne by the Compartment and could accordingly affect its performance.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In order to achieve its management objective, the Compartment will use (i) the purchase of a basket of balance sheet asset, especially international equities, and (ii) an over-the-counter futures exchange contract allowing the Compartment to achieve its management objective, by transforming the exposure of its assets into an exposure to a Benchmark Portfolio as defined below.

This Benchmark Portfolio is calculated in USD once a day by Lyxor International Asset Management with reference to the closing price of the Index on the same day.

The "Benchmark Portfolio" will be composed of the following elements:

- A VIX portfolio, offering variable exposure to the Index aiming to achieve the Target Exposure in a low-volatile market, i.e. 50% of the value of the Benchmark Portfolio (hereinafter, "VIX portfolio");

- A variable money-market portfolio, whose performance replicates the overnight Fed funds capitalised rate (hereinafter, "Money market portfolio"), enabling, in particular, the Compartment's VaR to be limited.

The management method is to daily adjust (if necessary) the value of the VIX portfolio so as to bring it to the level of exposure fixed for the week.

Information relative to the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Index, in particular in the event of a public offering affecting one of the securities making up the Index or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Index.

Determination of the VIX portfolio:

On each day D, the value of the VIX portfolio is determined by the value of the Benchmark Portfolio at D-1 multiplied by the Exposure (as defined below) up to the limit of the Target Exposure.

Determination of the Exposure:

The "Exposure" is a parameter fixed by Lyxor International Asset Management and revised each week by a Management Committee ("Committee"). It is used to calculate the exposure of the Benchmark Portfolio to the Index seven working days after its determination, for a period of one week (the "Period").

In a low-volatile market situation, the Exposure will be close or equal to the Target Exposure. In a volatile market situation, resulting in a substantial increase in the Compartment 's VaR, the Exposure will be reduced in order to limit the VaR.

The determining factors taken into account by Lyxor International Asset Management when fixing the level of Exposure for the relevant Period are the Compartment's VaR, as well as volatility forecasts for the Index over the Period.

The level of Exposure will be between 0% and 50%, with a target of 50% in a low-volatile market.

Reduction in the Exposure below the Target Exposure corresponds to high volatility realised by the Index as well as high forecast volatility for Index for the Period, resulting in increased VaR for the Compartment;

Conversely, a return to the Target Exposure corresponds to a reduction in the volatility realised by the Index as well as in the forecast volatility of the Index for the Period, resulting in limited VaR.

For the Period from the Compartment's creation date on 27/05/2013, the Exposure is fixed at 45%.

c. Determination of the Money-market portfolio:

On each day D, the Money-market portfolio is equal to the difference between the value of the Benchmark Portfolio and the value of the VIX portfolio as determined below.

d. Formula for calculating the value of the Benchmark Portfolio "RP"

$$PR_j = \left[\underbrace{V_{j-1} \times \frac{S_j}{S_{j-1}}}_{\text{VIX portfolio}} + \underbrace{\left(PR_{j-1} - V_{j-1} \right) \times \left[1 + \left(r \times \frac{\Delta_j}{360} \right) \right]}_{\text{Money-market portfolio}} \right]$$

With:

PRj: is the value in USD of the Benchmark Portfolio on date d

PR0: is the initial value of the Benchmark Portfolio = USD 100

Vj-1: is the value of the VIX portfolio on date d-l calculated as follows: Vj-1 = E j-1 x PR j-1

With:

E: is the Exposure determined at each Committee meeting seven working days before the last publication day of the Index for each week and applied on the first working day following this publication date for the Index. The Exposure will be equal to the Target Exposure in a low-volatile market and could be reduced to 0% if there is a substantial increase in the Compartment's VaR.

Sj: is the closing price of the Index on the date d

Sj-1: is the closing price of the Index on the date d-1

r: is the US money-market overnight rate in USD, namely the value of the Fed Funds rate observed on d-l (posted on the Reuters [.FEDL] page. This rate serves as the reference for calculating the Money-market portfolio.

Δj: is the number of calendar days between the two publication dates of the Index.

Information for investors regarding the Benchmark Portfolio:

Holders of units in the Compartment will be notified by posting on the following website www.lyxoretf.com of the new exposure "E", which is revised each week no later than seven working days before the effective implementation of this new exposure in the calculation of the Benchmark Portfolio.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

Investment in the assets of collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the securities held as assets by the Compartment (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Portfolio.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

Through the Compartment, the bearer is primarily exposed to the following risks:

- Market risk linked to the implicit volatility of the S&P 500 Index:

The Compartment is exposed up to 50% to the variations of the Index. The Compartment is thus exposed up to 50% to the market risks linked to the evolution of the implicit volatility of the securities included in the S&P 500 Index. Investors are in particular exposed to the downward movement in volatility taking place in coming years.

- Interest rate risk:

The Compartment is 50% to 100% exposed to any movement in the money markets, in particular following decisions of the American Central Bank. As a result, if interest rates fall below management fees and other structural costs, the Compartment 's net asset value could depreciate.

- Risk that the management objective may only be partially reached:

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Portfolio, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments:

In order to reach its investment objective, the Compartment uses Future Financial Instruments ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Portfolio. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime:

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings:

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations:

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings:

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Index:

In case of events affecting the Index, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Index" are understood to mean the following situations:

i) The Index is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Index is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Index,

iv) The supplier of the index makes a significant change to its formula or calculation method of the index (other than a minor modification such as the adjustment of the underlyings used with this Index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Index becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Index's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Index's performance.

- Securities transaction risk:

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Index.

- Capital loss risk:

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Index be negative over the investment period.

- Counterparty risk:

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Liquidity risk (primary market):

Should the Compartment (or one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Portfolio, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing:

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Index, and/or

ii) Suspension of the market(s) of the underlyings used by the Index, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Risks due to an index of forward volatility contracts:

As the underlying index of the Benchmark Portfolio is composed of forward volatility contracts on the S&P500 Index, the Compartment is thus exposed to the liquidity risk inherent in the trading of such instruments.

Meanwhile, maintaining the exposure makes it necessary to "Roll" the forward contract positions: rolling the forward contracts consists in transferring a position in forward contracts nearing maturity (in any event before expiry of the forward contracts) to forward contracts with a longer maturity.

Investors are exposed to the risk of a loss or gain when the forward contracts are rolled.

- Exchange risk linked EUR/USD (C-EUR equities class) only:

The aforesaid unit classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Portfolio. Consequently, the net asset value of the aforesaid unit classes can decline despite an increase of the value of the Benchmark Portfolio and thus, as a result of exchange rate fluctuations.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure variable upward or downward up to 50% of the Index.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The net asset value of the unit C-EUR of the LYXOR UCITS ETF UNLEVERAGED S&P 500 VIX FUTURES ENHANCED ROLL Compartment shows an evolution of 5.75%* between the 31/10/2014 and 30/10/2015 and stands at EUR 33.4618 on 30/10/2015, meaning a fund performance of -13.48% since inception.

The net asset value of the unit C-USD of the LYXOR UCITS ETF UNLEVERAGED S&P 500 VIX FUTURES ENHANCED ROLL Compartment shows an evolution of -6.76%* between the 31/10/2014 and 30/10/2015 and stands at USD 36.9636 on 30/10/2015, meaning a fund performance of -25.76% since inception.

The fund replicates the performance of the Lyx Unlev Portfolio index, listed in US dollar (USD). The management objective is to obtain a variable exposure of up to a maximum of 50% upward or downward to the volatility of S&P 500 via the index S&P 500 Vix Futures Enhanced Roll, while maintaining a value at risk (VAR) limited through money-market instruments.

This index has shown an evolution of -6.24% over the fiscal year. As the class C-EUR is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% against the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the Lyx Unlev Portfolio index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Lyx Unlev Portfolio index.

The equities held as assets by the Compartment will notably be equities that make up the Lyx Unlev Portfolio index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 7 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0280% for the Compartment. The level of the tracking error for the period was of 0.25%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Procedure for the choice of intermediaries

The manager selects intermediaries that are necessarily included in the list of intermediaries agreed upon by the management company.

This list is established on the basis of objective criteria that notably take into account the quality of the services rendered and the applied price conditions.

In compliance with article 314-82 of the AMF General Regulations, the report relative to the intermediation expenses is available on our Internet site at the address: www.lyxor.fr

Overall risk of the Compartment

The management company's method for calculating the commitment measurement is the probabilistic method in compliance with article 411-44-5 of the general regulations of the [French] Financial Markets Authority.

The employed VAR calculation parameters are the following:

	LYXOR UCITS ETF UNLEVERAGED S&P 500 VIX FUTURES ENHANCED ROLL
Type of VAR	Absolute
Model	Historical
Confidence interval	99%
Time horizon	20 days
Number of historical scenarios	260
Minimum VAR	13.39%
Maximum VAR	18.76%
Average VAR / VAR limit	77.47%
VAR limit	20%

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the financial manager by delegation.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.40% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt instruments listed in euros.

The LYXOR UCITS ETF BONO 10Y - MTS SPAIN GOVERNMENT BOND (DR) Compartment (hereafter the "Compartment") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities classes: Capitalisation of the amounts available for distribution.

D-EUR equities classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the incomes. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the FTSE MTS Target Maturity Government Bond Spain (Mid Price) Index (the "Benchmark Indicator"), listed in EUR, and representative of Spanish sovereign bonds having a target residual maturity of 10 years.

The anticipated level of the ex-post tracking error under normal market conditions is 0.02%.

Benchmark indicator:

The Benchmark Indicator FTSE MTS Target Maturity Government Bond Spain (Mid Price) Index (the "Benchmark Indicator") is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator measures the performance of Spanish Government bonds with residual maturities targeting 10 years. It is listed in EUR.

The Benchmark Indicator is calculated by FTSE MTS.

Benchmark indicator methodology

The Benchmark Indicator is composed of bonds issued by the Spanish government with an average residual maturity of 10 years. The index components were initially selected using the same criteria as for the "FTSE FTSE MTS", which are shown below.

The following bonds qualify:

- Nominal, fixed-coupon bonds, redeemable upon maturity, denominated in the local currency, with no embedded option and non-convertible;

- Traded on the FTSE MTS platform;
- Issued by the Spanish government;
- Have a minimum outstanding issuance of one billion euros.

Benchmark Indicator revision and composition

The Benchmark Indicator's composition is revised monthly.

The performance tracked is that of the Benchmark Indicator's closing price at 5:30 p.m. (CET).

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator's components is available on the Internet site: http://www.ftse.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is available through Reuters and Bloomberg.

Reuters code: FMMPESX5= Bloomberg code: FMMPESX5

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the MF accessible on Lyxor's website at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD non-member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities guaranteed or issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the Compartment is managed:	Between 7 and 12
Currencies in which securities held by the Compartment are listed:	Euro: from 0 to 100% of net assets Others: from 0 to 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone : from 0 to 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios provided for by the regulation, financial instruments of any kind. The Compartment will be mainly invested in bonds making up the Benchmark Indicator.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the MF's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the MF lends or otherwise temporarily disposes of securities it must receive guarantees in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the MF within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets. In compliance with the aforesaid conditions, the guarantees received by the MF can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The MF's management company will apply a margin to the financial guarantees received by the MF in the event of temporary securities transactions. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

- Deposited in an authorised institution

- Invested in high-quality government bonds

- Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the compartment is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

- Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk (primary market)

Should the Compartment (or, if relevant, one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the equities of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use Future Financial Instrument (FFI) on an ancillary basis. In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's management company and the counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed. If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment bonds. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the Spanish government bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is greater than 3 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux - France.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 31 January 2013.*
- *Compartment creation date: 11 February 2013.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF BONO 10Y - MTS SPAIN GOVERNMENT BOND (DR) Compartment shows an evolution of 6.59%* between 31/10/2014 and 30/10/2015 and stands at EUR 144.092 on 30/10/2015, meaning a fund performance of 44.09% since inception.

The fund replicates the performance of the MTS Mid Price Spain 10y Target index, listed in euros (EUR), representative of Spanish government bonds with a maturity of close to 10 years.

This index has shown an evolution of 6.44 % over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MTS Mid Price Spain 10y Target index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the MTS Mid Price Spain 10y Target index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

On 30/10/2015, the tracking error reached the level of 0.0190% for the Compartment. The level of the tracking error for the period was of 0.02%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the

day of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the Board of Directors when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

C-EUR equities classes: Capitalisation of the amounts available for distribution.

D-EUR equities classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the result. The realised net capital gain will be capitalised.

appendix

The Compartment in no way benefits from the sponsorship, support or promotion, and is not sold by FTSE TMX Global Debt Capital Markets (collectively referred to as the "Holders").
FTSE TMX Global Debt Capital Markets cannot be held liable for the promotion or marketing of the Compartment.
FTSE MTS and the names of the FTSE MTS (FTSE MTS Index™) indices and of the FTSE MTS (FTSE MTS Indices™) indices are registered trademarks of FTSE TMX Global Debt Capital Markets. The FTSE MTS indices are calculated by FTSE TMX Global Debt Capital Markets, and marketed and distributed by MTSNext, a company owned by FTSE TMX Global Debt Capital Markets.
Neither FTSE TMX Global Debt Capital Markets nor MTSNext can be held liable for any losses or damages of any nature whatsoever (including, notably, investment losses) linked to all or part of the Compartment or to the supply of the FTSE MTS Target Maturity Eurozone Government Bond Spain (Mid Price) IG 25Y+ Index, or of sub-indices or of registered trademarks.

Compartments / feeder	LYXOR UCITS ETF MTS 1-3Y SPAIN GOVERNMENT BOND (DR) is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt instruments listed in euros.

The LYXOR UCITS ETF MTS 1-3Y SPAIN GOVERNMENT BOND (DR) Compartment (hereafter the "Compartment") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index compartment.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

D-EUR equities classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the incomes, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the "FTSE MTS Spain Government 1-3Y (Mid Price) Index" (the "Benchmark Indicator"), listed in EUR and representative of the Spanish sovereign bonds with maturities of 1 to 3 years.

The anticipated level of the ex-post tracking error under normal market conditions is 0.02%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator measures the performance of Spanish Government bonds with maturities between 1 and 3 years. It is listed in EUR. The Benchmark Indicator is calculated by FTSE MTS.

The Benchmark Indicator is composed of bonds issued by the Spanish government with an average maturity between 1 and 3 years. The index components were initially selected using the same criteria as for the "FTSE MTS Government Indices", which are shown below.

The following bonds qualify:

- Nominal, fixed-coupon bonds, redeemable upon maturity, denominated in the local currency, with no embedded option and non-convertible;

- Traded on the FTSE MTS platform;

- Issued by the Spanish government;

- Have a minimum outstanding issuance of one billion euros.

The Benchmark Indicator's composition is revised monthly. The complete methodology is available on Internet site: www.ftse.com

The performance tracked is that of the Benchmark Indicator's closing price at 5:30 p.m. (CET).

Benchmark Indicator publication

The Benchmark Indicator price is fixed daily and available through Reuters and Bloomberg.

Reuters code: FMMPESG5= Bloomberg code: FMMPESG5

The Benchmark Indicator's closing price is available on the Internet site: www.ftse.com.

Benchmark Indicator revision and composition

The Benchmark Indicator's composition is revised monthly.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator's components is available on the Internet site: http://www.ftse.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD non-member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the Compartment is managed:	Between 1 and 4
Currencies in which securities held by the Compartment are listed:	Euro: 100% of net assets Others: from 0 to 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone : 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios provided for by the regulation, financial instruments of any kind. The Compartment will be mainly invested in bonds making up the Benchmark Indicator.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the Compartment lends or otherwise temporarily disposes of securities it must receive guarantees in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received non-cash guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including liquidities, short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment in the event of temporary securities transactions. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

- Deposited in an authorised institution

- Invested in high-quality government bonds

- Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the compartment is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

- Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk (primary market)

Should the Compartment (or, if relevant, one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the equities of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use Future Financial Instrument (FFI) on an ancillary basis. In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's management company and the counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed.

If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment has recourse to FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Operational risk

In case of an operational failure of the Board of Directors or of one of its representatives, investors may incur delays in the processing of subscriptions, conversions and redemptions of the equities, or other disturbances.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the Spanish government bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is greater than 3 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux - France.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 4 June 2013.*
- *Compartment creation date: 18 June 2013.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF MTS 1-3y SPAIN GOVERNMENT BOND (DR) Compartment shows an evolution of 1.59%* between 31/10/2014 and 30/10/2015 and stands at EUR 107.5546 on 30/10/2015, meaning a fund performance of 7.55% since inception.

The fund replicates the performance of the MTS Mid Price Spain Govt 1-3y Target index, listed in euros (EUR), representative of Spanish government bonds with a maturity of close to 1-3 years.

This index has shown an evolution of 1.55% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MTS Mid Price Spain 1-3y Target index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the MTS Mid Price Spain 1-3y Target index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 3 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

On 30/10/2015, the tracking error reached the level of 0.0248% for the Compartment. The level of the tracking error for the period was of 0.02%.

The discrepancy between the target tracking error and the actual tracking error was produced during the changing of the Benchmark (transition from BID to MID) in November 2014.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the

day of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

D-EUR equities classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the incomes, one or more times each year. The realised net capital gain will be capitalised.

appendix

The Compartment in no way benefits from the sponsorship, support or promotion, and is not sold by FTSE TMX Global Debt Capital Markets (collectively referred to as the "Holders").
FTSE TMX Global Debt Capital Markets cannot be held liable for the promotion or marketing of the Compartment.
FTSE MTS and the names of the FTSE MTS (FTSE MTS Index™) indices and of the FTSE MTS (FTSE MTS Indices™) indices are registered trademarks of FTSE TMX Global Debt Capital Markets. The FTSE MTS indices are calculated by FTSE TMX Global Debt Capital Markets, and marketed and distributed by MTSNext, a company owned by FTSE TMX Global Debt Capital Markets.
Neither FTSE TMX Global Debt Capital Markets nor MTSNext can be held liable for any losses or damages of any nature whatsoever (including, notably, investment losses) linked to all or part of the Compartment or to the supply of the FTSE MTS Spain Government 1-3Y (Mid Price) Index, or of

sub-indices or of registered trademarks.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt instruments listed in euros.

The LYXOR UCITS ETF BTP 10Y – MTS Italy Government Bond (DR) Compartment (the "Compartment ") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index Compartment.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

D-EUR equities classes: The management company reserves the right to capitalise and/or distribute all or part of the incomes, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the FTSE MTS Target Maturity Government Bond Italy (Mid Price) Index (the "Benchmark Indicator"), listed in EUR, which is representative of Italian sovereign bonds having an average residual maturity of 10 years.

The anticipated level of the ex-post tracking error under normal market conditions is 0.02%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator is listed in euros.

The Benchmark Indicator measures the performance of Italian sovereign bonds having an average residual maturity of 10 years. The Benchmark Indicator is calculated by FTSE MTS.

The Benchmark Indicator is composed of Italian sovereign bonds having an average residual maturity of 10 years. The index components were initially selected using the same criteria as for the "FTSE MTS Government Indices", which are shown below.

The following bonds qualify:

- Nominal, fixed-coupon bonds, redeemable upon maturity, denominated in the local currency, with no embedded option and non-convertible;
- Traded on the FTSE MTS platform;
- Issued by the Italian government;
- Have a minimum outstanding issuance of two billion euros.

The Benchmark Indicator's composition is revised monthly. The complete methodology is available on Internet site: www.ftse.com

The performance tracked is that of the Benchmark Indicator's closing price at 5:30 p.m. (CET).

Benchmark Indicator publication

The Benchmark Indicator price is fixed daily and available through Reuters and Bloomberg.

Reuters code: FMMPITX5= Bloomberg code: FMMPITX5

The Benchmark Indicator's closing price is available on the Internet site: www.ftse.com.

Benchmark Indicator revision and composition

The Benchmark Indicator's composition is revised monthly.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator's components is available on the Internet site: http://www.ftse.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD non-member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the Compartment is managed:	Between 7 and 12
Currencies in which securities held by the Compartment are listed:	Euro: 100% of net assets Others: from 0 to 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone : 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios provided for by the regulation, financial instruments of any kind. The Compartment will be mainly invested in bonds making up the Benchmark Indicator.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the Compartment lends or otherwise temporarily disposes of securities it must receive guarantees in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received non-cash guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including liquidities, short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment in the event of temporary securities transactions. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

- Deposited in an authorised institution

- Invested in high-quality government bonds

- Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the compartment is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

- Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk (primary market)

Should the Compartment (or, if relevant, one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the equities of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use Future Financial Instrument (FFI) on an ancillary basis. In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's management company and the counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed.

If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the Italian government bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is greater than 3 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux - France.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 7 August 2013.*
- *Compartment creation date: 2 September2013.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF BTP 10Y- MTS ITALY GOVERNMENT BOND (DR) Compartment shows an evolution of 9.05%* between 31/10/2014 and 30/10/2015 and stands at EUR 133.19 on 30/10/2015, meaning a fund performance of 33.19% since inception.

The fund replicates the performance of the MTS Mid Price Italy 10y Target index, listed in euros (EUR), representative of Italian government bonds with a maturity of close to 10 years.

This index has shown an evolution of 9.18% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MTS Mid Price Italy 10y Target index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the MTS Mid Price Italy 10y Target index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 4 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

On 30/10/2015, the tracking error reached the level of 0.0120% for the Compartment. The level of the tracking error for the period was of 0.02%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the

day of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

appendix

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

D-EUR equities classes: The management company reserves the right to capitalise and/or distribute all or part of the incomes, one or more times each year. The realised net capital gain will be capitalised.

The Compartment in no way benefits from the sponsorship, support or promotion, and is not sold by FTSE TMX Global Debt Capital Markets (collectively referred to as the "Holders").
FTSE TMX Global Debt Capital Markets cannot be held liable for the promotion or marketing of the Compartment.
FTSE MTS and the names of the FTSE MTS (FTSE MTS Index™) indices and of the FTSE MTS (FTSE MTS Indices™) indices are registered trademarks of FTSE TMX Global Debt Capital Markets. The FTSE MTS indices are calculated by FTSE TMX Global Debt Capital Markets, and marketed and distributed by MTSNext, a company owned by FTSE TMX Global Debt Capital Markets.
Neither FTSE TMX Global Debt Capital Markets nor MTSNext can be held liable for any losses or damages of any nature whatsoever (including, notably, investment losses) linked to all or part of the Compartment or to the supply of the FTSE MTS Target Maturity Government Bond Italy (Mid Price)

Index, or of sub-indices or of registered trademarks.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the LYXOR UCITS ETF CSI 300 A-SHARE Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index Compartment.

Terms of determination and allocation of incomes:

Class of C-EUR equities: Income capitalisation.

Class of D-EUR equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the incomes.

Class of C-USD equities: Income capitalisation.

Class of D-USD equities: The Board of directors reserves the right to capitalise and/or distribute all or part of the incomes.

Management objective:

The management objective is to replicate the evolution, upward or downward, of the CSI 300 Net Total Return Index ("Benchmark Indicator") listed in Chinese Yuan ("CNY"), representative of the performance of the large capitalisations on the "A Shares" market, namely securities issued by companies founded in the people's Republic of China, excluding Hong Kong.

The anticipated level of the ex-post tracking error under normal market conditions is 0.30%.

Benchmark indicator:

The Benchmark Indicator is a Total Return type index (i.e. all dividends detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator measures the performance of the "A Shares" market, i.e. securities issued by companies founded in People's Republic of China, excluding Hong Kong, traded on the Shanghai and Shenzhen stock exchanges and listed in Chinese Yuan ("CNY"), by targeting, in general, the 300 largest capitalisations and the most important liquid equities among all A Shares.

The Benchmark Indicator is a weighted index by free-float market capitalisation.

The Benchmark Indicator is calculated by China Securities Index Co., Ltd. ("CSI"), a joint venture incorporated on 25 August 2005 between the Shanghai and Shenzhen stock exchange, specialising in the management of financial indices and in the delivery of services allocated with these indices.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised every six months, according to the methodology described in the Benchmark Indicator's Rulebook, available on the website of China Securities Index Co. Ltd. at: www.csindex.com.cn.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the Internet site: www.csindex.com.cn.

Benchmark Indicator publication

The Benchmark Indicator fixing price is provide daily by Reuters and Bloomberg.

Reuters code: CSIN00300

Bloomberg code: CSIN00300

The Benchmark Indicator's closing price is available at the Internet site: www.csindex.com.cn.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets).

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the financial manager by delegation, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

Any counterparty chosen by the Compartment as counterparty to a contract on future financial instruments should be a first class financial institution authorised for matched principal trading.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None. The Compartment will not invest in securities comprising derivatives.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The Compartment will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument ("FFI") adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- Suspension or stoppage of the calculation of the Benchmark Indicator, and/or;

- Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or;

- The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or;

- A market maker's violation of the rules applicable to this marketplace, and/or;

- A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's management company and the FFI's counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment bonds. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution;

ii) The Benchmark Indicator is definitively discontinued by the Benchmark Indicator;

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;

iv) The supplier of the Benchmark Indicator makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost;

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid;

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the C-EUR and D-EUR (EUR/CNY) equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

- Exchange risk linked to the C-USD and D-USD (USD/CNY) equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Specific risks linked to investment in People's Republic of China:

Persons buying Compartment shares must be aware of the following risks inherent to any investment in People's Republic of China ("PRC"):

- Economic, political and social risks

Any political change, social instability or insecurity and unfavourable diplomatic evolution which may occur in or in connection with the PRC could result in the introduction by the Chinese State of additional restrictions and limits, notably expropriation, excessive taxes or nationalisation of certain companies included in the Benchmark Indicator. Investor's attention is also drawn to the fact that any change in the politics of the PRC could have an adverse impact on PRC stock exchange and on the performances of the ompartment and could result in the winding up of the Compartment by decision of the Board of Directors.

- Economic risks in the PRC

The economy of the PRC has recently grown very rapidly. It is, however, not certain that this growth will continue and it is possible that the growth will be uneven between the different sectors the of the PRC economy. Moreover, the PRC government has from time to time put in place various measures to prevent the economy from overheating. Moreover, the transformation of the PRC's economy from a socialist economy to a more market-oriented economy has resulted in economic and social tensions in this country such that no guarantee can be given that this transformation will continue or will remain a success.

All these considerations could negatively affect the performances of the Compartment.

- Capital repatriation risks

The system for repatriating capital is subject to the approval by the Chinese SAFE ("State Administration of Foreign Exchange") and there are restrictions required regarding the sums and frequency of such repatriation. The Compartment has recourse to swap contracts that are traded OTC outside the People's Republic of China so the restrictions or suspension regarding the ability of entities having the capacity of qualified foreign institutional investor – "QFII" to repatriate amounts in foreign currencies should not affect the operation of the Compartment.

However, when the swap counterparty is also a QFII or if this swap counterparty enters into a hedge with an affiliated company with QFII status, any impossibility for such QFII to repatriate currencies could possibly result in liquidity problems for the swap counterparty, which could certainly have a negative impact on the Compartment.

Furthermore, the regulations or certain economic standards in PRC regarding the legal status of the repatriation to or convertibility of amounts in foreign currencies originating in the local Chinese market on other markets could be modified in a way that is detrimental, irrespective of the will of the mutual fund and the Management Company.

Where applicable, the regulatory developments and unfavourable situations described above, which disrupt or restrict the convertibility or transferability of foreign currencies could potentially, not only:

- Negatively affect the ability of the Compartment to properly achieve its investment objective, and/or;

- Adversely affect the performances of the Compartment, but could also

- Ultimately result in the winding up of the Compartment by decision of the Board of Directors.

- Legal system in the PRC

The legal system in the PRC is based on statutory law. Nevertheless a major part of the legislation and regulations have not yet been tested and it is certain that they will be effectively applied. In particular, the PRC's regulations regarding the exchange rate controls are relatively recent and their application is still very uncertain. Moreover these regulations allow the China Securities Regulatory Commission – "CSRC" and the State Administration of Foreign Exchange – "SAFE" considerable discretion as to how they interpret the regulations, which is a source of uncertainty regarding how they are applied and used. All these considerations could have negatively repercussions of the Compartment's performances.

- The Compartment's shareholders have no rights to the underlying "A shares".

An investment in "A shares" (which include the securities made up to the Benchmark Indicator) and their trading by foreign companies, means that the latter must have received QFII status from the CSRC and a QFII quota from SAFE. Given that this Compartment does not have the QFII status, it will obtain its economic exposure to these securities through an OTC swap. OTC swaps do not confer any rights or interest, neither beneficial ownership nor equity rights, to the relevant A shares to which the OTC swaps relate. As a result, investors must be aware that an investment in the Compartment is not the equivalent of owing the A shares making up the benchmark Indicator. Investors will thus have no right to such A shares, neither as beneficial owners nor as owners. As an OTC swap represents an obligation of the swap Counterparty rather than a direct investment in A shares, the Compartment may suffer losses equal to the total value of the swap if the swap Counterparty fails to meet its obligations incumbent to it by virtue of the swap contract.

- Investment quota allocated to investors with QFII status

The PRC's regulations governing QFII status can be modified at any time by the CSRC and/or SAFE which could have a prejudicial and negative impact on the Compartment's ability to achieve its investment objective and could result in the winding-up of the Compartment. In particular, the QFII status means that any increase in the investment quota is subject to authorisation from SAFE. If an investor with QFII status wishes to increase its own quota at any given time, it may take quite a long time for SAFE approval to be obtained. Any restriction placed on the amount of the quota made available to the swap Counterparty by the CSRC and SAFE could, over a certain period, prevent the latter from increasing the size of the transactions relating to OTC traded swaps, in which case the Board of Directors could decide to close the Compartment to all new subscriptions if it proves impossible to designate another swap counterparty for the Compartment. A as result, this restriction could affect the shares, which could trade at a price above their net asset value. Finally, if the swap Counterparty loses its QFII status or the related quota, it is lawful for the Board of Directors to wind up the Compartment, especially if it is impossible to find another swap counterparty.

- State control of exchange rates and of future exchange rate variations

Since 1994, the conversion of CNY into USD has been at the rates fixed by the People's Bank of China; the rates are fixed daily based on the exchange rates observed the previous day on the interbank market in the PRC. On 21 July 2005, the government of the PRC introduced a floating exchange rate regime managed such that the value of the CNY fluctuates in line with supply and demand within a range fixed by the authorities as well as with reference to a basket of currencies. No guarantee can be given that in the future the CNY exchange rate will not fluctuate significantly against the USD or other currencies. Any appreciation of the CNY against the USD or the EUR will increase the performances of the Benchmark Indicator expressed in USD or in EUR which replicates the Compartment by means of an OTC swap, and therefore its net asset value, which will be expressed in USD or in EUR, and vice versa.

- Dependence on the A shares market

The existence of a liquid market for the A shares can depend on the supply of and demand for A shares. It should be noted that the Shanghai and Shenzhen stock exchanges, on which the A shares are listed, are undergoing huge changes and that their market capitalisation and the volume of trades carried out on these exchanges is lower than on the stock exchanges of the developed countries. The volatility of the markets in A shares and the difficulties in settling trades in the same could result in not-insignificant fluctuations in the price of the securities traded on these markets, and ultimately in the net asset value of the Compartment.

- Taxation in the PRC

Several tax reforms have been introduced by the government of the PRC in recent years, and it is possible that the current tax rules will be revised or modified in the future. Any change in tax policy could lead to a reduction in after-tax profits for companies in the PRC on which the Compartment's performance depend.

Moreover, even if the PRC's State Administration of Taxation has confirmed a withholding tax on income in the form of dividends, premiums and interest paid to investors with QFII status, it should be noted that it is impossible to know with certainty what obligations of these investors are in respect of tax deducted by the PRC on capital gains and profits (apart from dividend, premium and interest income). The OTC swap contracts concluded between the Compartment and the swap Counterparty will accordingly contain a specific clause in the section on contractual obligation under which the Compartment undertake to indemnify the swap Compartment with any future or respective tax charge which could arise from the transactions carried out by the swap Counterparty on the A shares and the holding of such shares by the same for the purposes of hedging these OTC shares.

If the Valuation Agent for the swaps and the Compartment believes that the risk of a similar withholding tax being levied on the gains realised by QFII investors is becoming significant, they can at any moment adjust the valuation in order to take account of the expected amount of the tax liability. Any adjustment to the valuation of the OTC swaps thus made will remain in force until the position of the swap Counterparty in respect of the PRC taxes is known and the Valuation Agent for the swaps should then:

- Decide either that any amount thus deducted from the value of these OTC swaps is sufficient to cover the corresponding tax liability of the swap Counterparty in which case the Valuation Agent for the swaps can decide to adjust the value of these OTC swaps upwards, in order to correct any over-adjustment that has been made, or

- Decide that any amount thus deducted from the value of these OTC swaps is not sufficient to cover the corresponding tax liability of the swap Counterparty, on which case the Valuation Agent for the swaps can decide to further adjust the value of these OTC swaps.

Consequently, we would draw investors' attention to the fact that:

- The net asset value of the Compartment may be diminished by any such adjustment made to the value of the OTC swaps;

- The diminution in the performances of the Compartment which shareholders may experience following such adjustment will depend on the date on which they bought and/or sold the shares in the Compartment; and

- The scale of this diminution on the performances of the Compartment may not be proportional to the number of equities that an investor holds in the Compartment due to a potential retrospective amendment to the tax due in the PRC and, in certain circumstances, this could amount to 100% of the net asset value of a share class.

According to the provisions of the PRC Corporate Income Tax law (effective from 1 January 2008), dividends, premiums, interest and capital gains originating in the PRC and paid to a company that is not resident in the PRC for tax purposes, are subject to a withholding tax of 10%. This withholding tax may be reduced by virtue of a double taxation treaty with China, provided that certain conditions are met and that the PRC's tax administration is in agreement. Although PRC's tax administration may apply a withholding tax to the dividends, premiums and interest paid by companies resident in China for tax purposes to investors with QFII status, it has not yet decided to tax the recovery of the withholding tax on the capital gains by the latter.

Although currently in the PRC, withholding tax is not yet charged on capital gains realised by QFII on the disposal of A shares, there is still a risk that the PRC's tax administration will try to impose a withholding tax on capital gains without any prior notice. Moreover, there is a potential risk of this tax measure being applied retrospectively. Any withholding tax on capital gains charged to a QFII investor and owned by the latter can be passed onto the Compartment as set out above. The Management Company has decided that no provision will be set aside at this moment by the Compartment for such potential withholding tax. Consequently, any retrospective application of this tax could lead to a considerable, or even significant, fall in the Compartment's net asset value per share. As a result, it is possible that an investor will suffer losses due to the introduction of withholding tax on the capital gains payable to a QFII for periods before the investor's acquisition of his holdings in the Compartment and that these losses are inconsistent with the gain or loss resulting from the participation of this shareholder in the Compartment.

It should be noted further that where applicable dividends paid to shareholders by the Compartment derive from the receipt of corresponding amounts under the OTC swaps and that all amounts of this kind will be net of the withholding tax on dividends, premiums and interest prevailing in the PRC.

On top of the withholding tax on dividends, premiums, interests and capital gains referred to above, the PRC has, since 19 September 2008, deducted from the seller a stock exchange tax on the transfer of A shares equal to 0.1% of the value of the transferred shares.

- Standards for accounting and communication of information:

The standards for accounting, audits and communication of financial data, as well as the practices applying to PRC companies in these areas may be different from those applying in countries where the financial markets are more developed. These disparities can affect areas such as the methods for valuing assets and the rules for communicating information to investors.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed upwards or downwards to performance of the large capitalisations on the "A shares" market, namely, securities issued by companies incorporated in People's Republic of China, excluding Hong Kong.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *Compartment creation date: 10 September 2013.*

Activity report

The net asset value of the unit C-EUR of the LYXOR UCITS ETF CSI 300 A-SHARE Compartment shows an evolution of 53.51%* over the fiscal year and stands at EUR 164.9349 on 30/10/2015, resulting in the fund's performance being equal to 64.93% since inception.

The net asset value of the unit C-USD of the LYXOR UCITS ETF CSI 300 A-SHARE Compartment shows an evolution of 35.35%* over the fiscal year and stands at USD 137.3348 on 30/10/2015 resulting in the fund's performance being equal to 37.33% since inception.

The fund replicates the performance of the CSI 300 Net Return Index, listed in Chinese Yuan (CNY), representative of the performance on the A shares market, namely securities issued by companies incorporated in People's Republic of China, excluding Hong Kong, that are traded on Shanghai and Shenzhen stock exchange and listed in Chinese Yuan, and that target, in general the 300 more capitalised and more liquidated equities among all A shares.

This index has shown an evolution of 42.83% over the fiscal year. As the classes C-EUR, C-USD, is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 8.89% compared to the CNY, the USD increased by 3.34% compared to the CNY.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the CSI 300 Net Return Index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the CSI 300 Net Return Index.

The equities held as assets by the Compartment will notably be equities that make up the CSI 300 Net Return Index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0850% for the Compartment. The level of the tracking error for the period was of 0.3%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.40% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the LYXOR UCITS ETF MSCI EM LATIN AMERICA PEA Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several Euro zone countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's investment objective is to replicate, upward or downward, the evolution of the MSCI Emerging Markets Latin America Net Total Return (see "Benchmark Indicator" hereinafter), listed in USD, and representative of performances of large and mid-capitalisations of the 5 following countries: Brazil, Chili, Colombia, Mexico and Peru.

The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

Benchmark indicator:

The Benchmark Indicator is the MSCI Emerging Markets Latin America Net Total Return index (net dividends reinvested), listed in US dollar (USD) (the "Benchmark Indicator").

The Benchmark Indicator measures the performance of the equities market of South America emerging markets. The Benchmark Indicator is calculated and published by international index supplier MSCI.

MSCI Inc. is one of the leading providers of financial indices. MSCI's products and services include not only financial indices, but also performance and risk portfolio analysis tools for investors. MSCI is based in New York, and has commercial and research offices across the entire world.

The Benchmark Indicator is an equity index calculated and published by international index supplier MSCI. The Benchmark Indicator comprises only Latin American emerging market stocks and boasts fundamental characteristics of MSCI indices, namely: adjustment of the market capitalisation of stocks in the Benchmark Indicator based on their free float and level of representation on the markets of each country such that it represents 85% of the free float-adjusted market capitalisation.

The emerging markets are those of Brazil, Chili, Colombia, Mexico and Peru.

The Benchmark Indicator is based on the methodology of MSCI Global Investable Market Indices (GIMI), a global and consistent Benchmark construction approach, whether on a world or regional scale, covering all sizes of market capitalisation, activity sectors or even investment styles. This methodology aims to provide comprehensive coverage of the investment universe with an emphasis on liquidity, investibility and replicability. The Benchmark Indicator is revised every quarter (February, May, August and November) to ensure it properly reflects the changes on the emerging market stock markets while limiting the portfolio turnover rate. During the reviews of May and November, the Benchmark Indicator is reweighted and the mid and large capitalisation limits are revised.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.msci.com

Benchmark Indicator revision and composition

The Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.mscibarra.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .dMILA00000NUS Bloomberg code: NDUEEGFL

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.mscibarra.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the MF will notably be equities that make up the Benchmark Indicator, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

At all times, the Compartment will invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the agreement on the European Economic Area and that has signed, with France, a tax convention that includes an administrative assistance clause for the purpose of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equities of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to primarily use the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),

- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
- Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- Geographical area,
- Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the index, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the reference Benchmark Indicator followed by the Compartment.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the equities market of Latin America.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 8 August 2013.*
- *Compartment creation date: 2 September 2013.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF MSCI EM LATIN AMERICA PEA Compartment shows an evolution of 26.74%* over the fiscal year and stands at EUR 19.3492 on 30/10/2015, meaning a fund performance of -19.27% since inception.

The fund replicates the performance of the MSCI Daily TR Net Emerging Mar index, listed in American dollars (USD), representative of the performance of Latin American emerging countries equity market.

This index has shown an evolution of -34.83% over the fiscal year. As the C-EUR class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% against the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI Daily TR Net Emerging Mar index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI Daily TR Net Emerging Mar index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI Daily TR Net Emerging Mar index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0830% for the Compartment. The level of the tracking error for the period was of 0.1%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.65% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

LYXOR UCITS ETF MSCI EM Latin America PEA (the "Compartment") is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the establishment of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks of MSCI or of its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment and calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to bearers of the Compartment's equities or more generally to the public, with regard to the timeliness of a transaction involving mutual fund equities in general or the Compartment's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Compartment. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices is required to take into consideration the needs of Lyxor International Asset Management or of the bearers of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Compartment's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices assumes any liability or obligation with regard to the administration, management or marketing of the Compartment.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE ACCURACY AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE REGARDING THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTS, BEARERS OF THE FUND OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY MSCI OR ANY OTHER PARTY BE HELD LIABILE WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

Off-balance sheet	-	-	-	-
Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type
Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	**33 846,33**
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Deferred settlement sales	33 846,33
-	-
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**34 808,90**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Account payable	33 846,33
Accrued expenses	962,57
-	-
-	-
-	-
Other operations	-

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	30 000	698 687,80	-	-
Subscription / redemption commission		-		-
Remittances		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**0,65**
Performance commissions (variable fees): amount of costs for the fiscal year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**
3.8.2 Description of the other commitments received and/or given ..... **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
- CIU securities	-
- Swaps	**-58 888,67**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

Advances paid during the fiscal year

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

currency EUR	**30.10.2015**	31.10.2014	31.10.2013	-	-
Net assets	**1 838 176,95**	1 716 784,73	1 562 524,40	-	-
Number of outstanding equities	**95 000**	65 000	60 000	-	-
Net asset value	**19,3492**	26,412	26,042	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**-7,20**	-0,81	1,67	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 2 September 2013.

Compartments / feeder	LYXOR UCITS ETF MSCI MEXICO is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification: International equities.

At least 60% of the LYXOR UCITS ETF MSCI MEXICO Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-USD, C-EUR and C-GBP: Capitalisation of all the amounts available for distribution.

Equities D-USD, D-EUR and D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to reproduce, downwards and upwards, the evolution of the MSCI Mexico index (Bloomberg code: NDEUMXF) (see section "Benchmark Indicator" hereafter) listed in USD, and representative of the performances of the equities of mid-cap and large-cap Mexican equities.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15%.

Benchmark indicator:

The Benchmark indicator is the MSCI Mexico index, listed in US dollars (USD) (the "Benchmark Indicator").

The Benchmark Indicator measures the stock-market performance of Mexican companies with medium and large free-float adjusted market capitalisations. The Benchmark Indicator is comprised of 25 companies and covers 85% of this market.

The Benchmark Indicator is calculated and published by international index supplier MSCI.

MSCI Inc. is one of the leading providers of financial indices. MSCI's products and services include not only financial indices, but also performance and risk portfolio analysis tools for investors. MSCI is based in New York, and has commercial and research offices across the entire world.

The Benchmark Indicator is a free float-adjusted capitalisation-weighted index designed to measure the performance of the equities of mid-cap and large-cap Mexican equities.

The Benchmark Indicator is based on the methodology of MSCI Global Investable Market Indices (GIMI), a global and consistent Benchmark construction approach, whether on a world or regional scale, covering all sizes of market capitalisation, activity sectors or even investment styles.

This methodology aims to provide comprehensive coverage of the investment universe with an emphasis on liquidity, investibility and replicability of the Benchmark Indicator.

The Benchmark Indicator is a Net Total Return index. A Net Total Return index includes dividends and all other types of income distribution in the calculation of the Benchmark Indicator's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.msci.com

Benchmark Indicator revision and composition

The Benchmark Indicator is rebalanced quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.mscibarra.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available through Reuters and Bloomberg.

Reuters code: .dMIMX00000NUS Bloomberg code: NDEUMXF

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.mscibarra.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the MF will notably be equities that make up the Benchmark Indicator, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities and debt securities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets) including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties. As a result, the Management Company will not commit to a formal, traceable and verifiable procedure for open competition between the counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the C-EUR/D-EUR (EUR/USD) and C-GBP/D-GBP (GBP/USD) units classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed to the Mexican equities market.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux - France.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 28 October 2013.*
- *Compartment creation date: 14November 2013.*

Activity report

The net asset value of the C-USD unit of the LYXOR UCITS ETF MSCI MEXICO Compartment shows an evolution of -18.69%* between the 31/10/2014 and 30/10/2015 and stands at USD 88.3738 on 30/10/2015, resulting in the fund's performance being equal to -11.63% since inception.

The fund replicates the performance of the MSCI Daily TR Net Emerging Markets Mexico USD index, listed in US dollars (USD) representative of the performance of the equity markets of Latin America emerging countries.

This index has shown an evolution of -18.22% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI Daily TR Net Emerging Markets Mexico USD index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI Daily TR Net Emerging Markets Mexico USD index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI Daily TR Net Emerging Markets Mexico USD index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 7 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0410% for the Compartment. The level of the tracking error for the period was of 0.15%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU and AIF operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of AIF operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.65% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in US dollars.

appendix

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities C-USD, C-EUR and C-GBP: Capitalisation of all the amounts available for distribution.

Equities D-USD, D-EUR and D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

LYXOR UCITS ETF MSCI MEXICO (the "Compartment") is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the establishment of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks of MSCI or of its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment and calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to bearers of the Compartment's equities or more generally to the public, with regard to the timeliness of a transaction involving mutual fund equities in general or the Compartment's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Compartment. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices is required to take into consideration the needs of Lyxor International Asset Management or of the bearers of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Compartment's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices assumes any liability or obligation with regard to the administration, management or marketing of the Compartment.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE ACCURACY AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE REGARDING THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTS, BEARERS OF THE FUND OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY MSCI OR ANY OTHER PARTY BE HELD LIABILE WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet	-	-	-	-
Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type
Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	**328 633,86**
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Deferred settlement sales	184 746,50
Account receivable	143 887,36
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**333 424,07**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Account payable	184 746,50
Deferred settlement purchases	143 887,36
Accrued expenses	4 790,21
-	-
-	-
Other operations	-

3.6 Shareholders' equity

		Subscriptions		**Redemptions**
Number of equities issued/redeemed during the fiscal year:	Number of equities	Amount	Number of equities	Amount
EQUITY C-USD / FR0011614114	-	-	35 000	3 302 472,00
Subscription / redemption commission by equity category:		Amount		Amount
EQUITY C-USD / FR0011614114		-		-
Remittances by equity category:		Amount		Amount
EQUITY C-USD / FR0011614114		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
EQUITY C-USD / FR0011614114		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**%**
Equity category:	
EQUITY C-USD / FR0011614114	**0,55**

Performance commissions (variable fees): amount of costs for the fiscal year	**Amount**
Equity category:	
EQUITY C-USD / FR0011614114	**-**
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	**-**
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

3.8.1	Description of guarantees received by the Compartment with indication of the capital guarantees	**None**
3.8.2	Description of the other commitments received and/or given	**None**

3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
	- CIU securities	-
	- Swaps	**-354 355,95**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

Advances paid during the fiscal year

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years
Compartment creation date: 14 November 2013.

Currency					
USD	**30.10.2015**	31.10.2014	-	-	-
Net assets	**10 693 239,06**	16 954 482,23	-	-	-

EQUITY C-USD / FR0011614114		Currency of the equity and of the NAV: USD			
	30.10.2015	31.10.2014	-	-	-
Number of circulating equities	**121 000**	156 000	-	-	-
Net asset value	**88,3738**	108,6825	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)*	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) (1)	**-**	-	-	-	-
Unit capitalisation *	**-32,84**	19,53	-	-	-

** The amounts of the distribution per unit, the unit capitalisation and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.*
(1) In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

Compartments / feeder	LYXOR UCITS ETF MSCI EM BEYOND BRIC is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification: International equities.

At least 60% of the LYXOR UCITS ETF MSCI EM BEYOND BRIC Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-USD, C-EUR and C-GBP: Capitalisation of all the amounts available for distribution.

Equities D-USD, D-EUR and D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the "MSCI EM Beyond BRIC Index" (Bloomberg code: M1EMBRIC) (see section "Benchmark Indicator" hereafter) listed in USD, and representative of the equities performances of listed companies in the emerging markets except for the BRIC segment, i.e. Brazil, Russia, India and China. The anticipated level of the ex-post tracking error under normal market conditions is 0.15%.

Benchmark indicator:

The Benchmark indicator is the MSCI EM Beyond BRIC index, listed in US dollars (USD) (the "Benchmark Indicator").

The Benchmark Indicator measures the equities performance of listed companies in the emerging markets except for the BRIC segment, i.e. Brazil, Russia, India and China. The index's geographic diversification criteria are observed by applying, each quarter, a 15% cap on each country's weighting.

The Benchmark Indicator is calculated and published by international index supplier MSCI.

MSCI Inc. is one of the leading providers of financial indices. MSCI's products and services include not only financial indices, but also performance and risk portfolio analysis tools for investors. MSCI is based in New York, and has commercial and research offices across the entire world.

The Benchmark Indicator is a free float-adjusted capitalisation-weighted index designed to measure the performance of the emerging equities excluding the BRIC (Brazil, Russia, India and China) segment.

The Benchmark Indicator is based on MSCI's Capped Indices Methodology, with each country's weighting capped at 15% and rebalanced each quarter. The weighting of the index by float-adjusted market capitalisation may in some cases result in concentration in a given sector, region or entity. MSCI Capped indices offer an alternative to indexes weighted simply on free float-adjusted market capitalisation, since the capping features limits sector, geography and issuer concentration.

This methodology aims to provide comprehensive coverage of the investment universe with an emphasis on liquidity, investibility and replicability of the Benchmark Indicator.

The Benchmark Indicator is a Net Total Return index. A Net Total Return index includes dividends and all other types of income distribution in the calculation of the Benchmark Indicator's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.msci.com

Benchmark Indicator revision and composition

The Benchmark Indicator is rebalanced quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.mscibarra.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available through Reuters and Bloomberg.

Reuters code: .MIEB00000NUS Bloomberg code: M1EMBRIC

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.mscibarra.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment may be exposed to the equities of a single issuing entity, for up to 20% of its assets. This 20% limit will be verified at each rebalancing date of the Benchmark Indicator, in compliance with method of calculation of the Benchmark Indicator, that limits to 20% the exposure of each equity of a single issuing entity and whose calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets) including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the index, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the C-EUR/D-EUR (EUR/USD) and C-GBP/D-GBP (GBP/USD) units classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed to the emerging equities market, excluding BRIC (Brazil, Russia, India and China).

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 21 November 2013.*
- *Compartment creation date: 4 December 2013.*

Activity report

The net asset value of the C-USD unit of the LYXOR UCITS ETF MSCI EM BEYOND BRIC Compartment shows an evolution of -16.94%* over the fiscal year and stands at USD 87.3461 on 30/10/2015, resulting in the fund's performance being equal to -12.65% since inception.

The fund replicates the performance of the MSCI EM beyond BRIC NRU index, listed in US dollars (USD), and is representative of an investment strategy in the emerging countries excluding the BRIC.

This index has shown an evolution of -16.47% over the fiscal year. As the C-EUR class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% compared to the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI EM beyond BRIC NRU index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI EM beyond BRIC NRU index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI EM beyond BRIC NRU index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0260% for the Compartment. The level of the tracking error for the period was of 0.15%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.55% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

appendix

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities C-USD, C-EUR and C-GBP: Capitalisation of all the amounts available for distribution.

Equities D-USD, D-EUR and D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Compartments / feeder	LYXOR UCITS ETF MSCI SELECT OECD EMERGING MARKETS GDP is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification: International equities.

At least 60% of the LYXOR UCITS ETF MSCI SELECT OECD EMERGING MARKETS GDP Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-USD, C-EUR and C-GBP: Capitalisation of all the amounts available for distribution.

Equities D-USD, D-EUR and D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to reproduce, downwards and upwards, the evolution of the MSCI Select OECD Emerging Markets GDP Weighted Index (Bloomberg code: M1EFOEGD) (see section "Benchmark Indicator" hereafter) listed in USD, and representative of the performances of the equities of mid-cap and large-cap equities of the emerging OECD countries.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15%.

Benchmark indicator:

The Benchmark indicator is the MSCI Select OECD Emerging Markets GDP Weighed Index, listed in US dollars (USD) (the "Benchmark Indicator").

The Benchmark Indicator is derived from the MSCI Select OECD Index parent index (the "Parent Index") and measures the performance of large-cap and mid-cap companies in the emerging OECD countries. These countries include: Chile, the Czech Republic, Hungary, Korea, Mexico, Poland and Turkey. Each country is weighted in proportion to the size of its economy (as measured by GDP) rather than by the size of its equity market.

The Benchmark Indicator is calculated and published by international index supplier MSCI.

MSCI Inc. is one of the leading providers of financial indices. MSCI's products and services include not only financial indices, but also performance and risk portfolio analysis tools for investors. MSCI is based in New York, and has commercial and research offices across the entire world.

The Benchmark Indicator is a custom index calculated by MSCI which includes a group of OECD countries that are selected using an RSI approach. The Benchmark Indicator uses the same methodology used by the MSCI GDP Weighted Indices.

The Benchmark Indicator is composed of a static list of the countries that compose the Parent Index, which currently includes: Chile, the Czech Republic, Hungary, Korea, Mexico, Poland and Turkey. The index scope is fully reviewed by the licensee and notified to MSCI at least five business days before the effective rebalancing date.

Any change in the scope of the Parent Index will be replicated in the Benchmark Indicator.

MSCI GDP Weighted Indices are rebalanced annually, generally on the last business day of May, which is the annual rebalancing date of the Parent Index. A country added to the Parent Index will be added to the Benchmark Indicator upon the next annual rebalancing. In contrast, a country removed from the Parent Index will be simultaneously removed from the Benchmark Indicator.

The Benchmark Indicator is a Net Total Return index. A Net Total Return index includes dividends and all other types of income distribution in the calculation of the performance of the index's components.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.msci.com

Benchmark Indicator revision and composition

The Benchmark Indicator is rebalanced annually.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.mscibarra.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available through Reuters and Bloomberg.

Reuters code: .dMGEF0000WNUS Bloomberg code: M1EFOEGD

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.mscibarra.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities and debt securities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets) including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties. As a result, the Management Company will not commit to a formal, traceable and verifiable procedure for open competition between the counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the index, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the C-EUR/D-EUR (EUR/USD) and C-GBP/D-GBP (GBP/USD) units classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed to the equities market of mid-cap and large-cap equities of the emerging OECD countries.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 29 November 2013.*
- *Compartment creation date: 12 December 2013.*

Activity report

The net asset value of the LYXOR UCITS ETF MSCI SELECT OECD EMERGING MARKETS GDP - C-EUR unit of the LYXOR UCITS ETF MSCI SELECT OECD EMERGING MARKETS GDP Compartment shows an evolution of -5.08%* over the fiscal year and stands at EUR 102.8511 on 30/10/2015, resulting in the fund's performance being equal to 2.85% since inception.

The fund replicates the performance of the MSCI EM OECD GDP USD NTR index, listed in US dollars (USD), representing an investment strategy in emerging OECD countries weighted by GDP.

This index has shown an evolution of -15.60% over the fiscal year. As the class C-EUR, LYXOR UCITS ETF MSCI Select OECD Emerging Markets GDP - C-EUR is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% compared to the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI EM OECD GDP USD NTR index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI EM OECD GDP USD NTR index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI EM OECD GDP USD NTR index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 7 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0340% for the Compartment. The level of the tracking error for the period was of 0.15%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.55% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

appendix

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities C-USD, C-EUR and C-GBP: Capitalisation of all the amounts available for distribution.

Equities D-USD, D-EUR and D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

** The amounts of the distribution per unit, the unit capitalisation and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.*
(1) In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

Compartments / feeder	LYXOR UCITS ETF EURO STOXX BANKS is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities from Euro zone countries.

At least 60% of the LYXOR UCITS ETF EURO STOXX BANKS Compartment, (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several Euro zone countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-EUR: Capitalisation of all the amounts available for distribution.

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "EURO STOXX® Banks Index" (Bloomberg code: SX7T) (see the "Benchmark Indicator" section hereafter) listed in EUR, and which represents the performance of the largest banks in the Euro zone.

The anticipated level of the ex-post tracking error under normal market conditions is 0.15%.

Benchmark indicator:

The Benchmark Indicator is the EURO STOXX® Banks Index, listed in Euro (EUR) (the "Benchmark Indicator").

The Benchmark Indicator measures the performance of Euro zone banks, as defined by the Industry Classification Benchmark (ICB), and offers exposure to the following Euro zone countries: Austria, Finland, Germany, Greece, Ireland, Italy, Luxemburg, Netherlands, Portugal and Spain.

The index is a sub-index of the EURO STOXX® Index (the "Parent Index"), which measures the performance of the large-cap, mid-cap and small-cap equities of the Euro zone's developed economies.

The Benchmark Indicator is weighted by float-adjusted market capitalisation and measures the performance of Euro zone banks, as defined by the Industry Classification Benchmark (ICB). The ICB categorizes companies on the basis of their main source of income. 4 categories exist, from the largest to the most detailed: into 10 different industries, which are in turn broken down into 19 super-sectors, 41 sectors and 114 sub-sectors.

The Benchmark Indicator is rebalanced quarterly, in March, June, September and December.

The Benchmark Indicator is a "Net Total Return" index. A Net Total Return index includes dividends and all other types of income distribution in the calculation of index performance.

Benchmark Indicator revision and composition

The Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by STOXX and are available on the Internet site: www.stoxx.com

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .SX7T Bloomberg code: SX7T.

The Benchmark Indicator's closing price is available on the Internet site: www.stoxx.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the equities held as assets by the Compartment (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the eurozone equity market.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 29 November 2013.*
- *Compartment creation date: 12 December 2013.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF EURO STOXX BANKS Compartment shows an evolution of -0.05%* over the fiscal year and stands at EUR 109.7626 on 30/10/2015, meaning a fund performance of 9.76% since inception.

The fund replicates the performance of the ESTX Bnk EUR NRt index, listed in euro (EUR), representing an investment strategy in the banking sector in Euro, weighted by market capitalization.

This index has shown an evolution of -0.10% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the ESTX Bnk EUR NRt index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the ESTX Bnk EUR NRt index.

The equities held as assets by the Compartment will notably be equities that make up the ESTX Bnk EUR NRt index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 7 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.1760% for the Compartment. The level of the tracking error for the period was of 0.15%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.30% per year including tax

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros (EUR).

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities C-EUR: Capitalisation of all the amounts available for distribution.

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Diversified.

The LYXOR UCITS ETF DAILY DOUBLE SHORT 10Y US TREASURY Compartment (hereafter the "Compartment") is an UCITS ETF strategy type index fund.

Terms of determination and allocation of amounts available for distribution:

Classes C-EUR and C-USD: Capitalisation of all the amounts available for distribution.

Classes D-EUR and D-USD: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of the Compartment is to be inversely exposed with a daily x2 leverage, upward or downward, to the daily performance of the US Treasury bonds market while reproducing the evolution of the "SGI Double Short 10y US Treasury" (Bloomberg Code: SGIXDSTY) index (see the "Benchmark Indicator" hereafter) while insofar as possible minimizing the tracking error between the Compartment's performances and those of the "SGI Double Short 10y US Treasury" index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.07%.

Benchmark indicator:

The Benchmark Indicator is the SGI Double Short 10y US Treasury strategy index, listed in US Dollar (USD) (the "Benchmark Indicator").

The Benchmark Indicator is a strategy index prepared by the Société Générale research teams, using a proprietary methodology. The Benchmark Indicator is calculated and maintained by Standard & Poor's.

The Benchmark Indicator is a total return strategy index that reflects the overall return over a period of time relative to the composite performance of a notional investment in the following: a series of "CBOT 10y US Treasury" futures and a US Federal Reserve's effective money-market rate.

The Benchmark Indicator offers inverse exposure, with daily 200% inverse leverage, to increases and decreases on futures contracts on 10 years US Treasury bonds. The Benchmark Indicator is therefore correlated with the performance of:

- a notional short position in CBOT 10y US Treasury futures that are closest to their expiry date, to which 200% leverage is applied,

and

- a long position in a daily investment that is representative of the interest earned on an overnight deposit that is indexed at the US Federal Reserve's effective funds rate.

Therefore if the value of CBOT 10y US Treasury futures declines on a Calculation Date (as this term is defined below), the Compartment's net asset value will increase by twice this amount on this Calculation Date and, inversely will decrease by twice as much if the price of CBOT 10y US Treasury futures rises, in which case shareholders will not benefit from the increase in the Benchmark Indicator.

The notional amount of the two investments in the CBOT 10y US Treasury futures and in the overnight deposit is revised daily in accordance with the Benchmark Indicator's most recent performance.

The Benchmark Indicator's daily performance is therefore equivalent to the inverse of twice the daily performance of CBOT 10y US Treasury futures plus the interest at the Fed Fund rate received daily on the value of the CBOT 10y US Treasury futures at the previous day's fixing price at 5:30 pm.

The leveraged position in a series of suitable futures contracts is rolled over to the next series of futures contracts at each revision date (as this term is defined below). The series of futures contracts is not modified between Revision Dates.

A "Revision Date" is the first business day immediately before the expiry date of a given series of futures contracts.

The Benchmark Indicator is calculated and published by Standard & Poor's Financial services LLC ("S&P") in accordance with the Benchmark Indicator methodology.

The composition of the Benchmark Indicator is revised quarterly.

The complete methodology is available at www.sgindex.fr

The monitored performance is that of the Benchmark Indicator's closing price at 5:30 p.m.

As the Benchmark Indicator's calculation methodology is not based on a direct exposure to the 10 years US Treasury bonds, but is rather based on an indirect exposure via futures contracts, the Compartment's performance will be impacted by the cost related to the roll of the aforesaid futures on a quarterly basis.

This phenomenon could negatively and progressively impact, potentially in a significant manner, the gap between the Compartment's performance and the gross performance of the short positions on the underlyings of the aforesaid futures, notably in case of long-term investment in the Compartment's equities.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised quarterly, in accordance with the methodology described in the Benchmark Indicator Rulebook, which is available on the SGIndex website at: www.sgindex.fr.

The Benchmark Indicator's leverage may also be adjusted intraday during trading hours if it falls by more than 40% on a Benchmark Indicator Calculation Day (i.e. if the absolute value of CBOT 10y US Treasury futures rises by more than 20%.

This frequency of the index rebalancing described above and the rolling over of the futures contracts at the Revision Dates could increase the Compartment's costs and therefore adversely affect the Compartment's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator are available at the following Internet site: www.sgindex.fr

Benchmark Indicator publication

The Benchmark Indicator is calculated daily at the 5:30 pm fixing price for CBOT 10y US Treasury futures.

The Benchmark Indicator is also calculated in real time every business day in France provided that the stock markets on which the Benchmark Indicator underlying components are listed are open, hereinafter a "Benchmark Indicator Calculation Day".

The Benchmark Indicator is available via Reuters and Bloomberg.

Reuters code: .SGIXDSTY Bloomberg code: SGIXDSTY

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

An investor subscribing to this Compartment is inversely exposed with a daily amplifying x2 leverage, upward or downward, to the daily performance of the US Treasury bond market for which the Benchmark Indicator is a representative indicator.

The securities held as assets by the Compartment will mainly be bonds issued by a Member State of the OECD or issued by non-government issuers residing in one of the Member States of the OECD.

The bonds basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

Interest rate sensitivity range within which the UCITS is managed:	Between 7 and 12
Currencies in which securities held by the Compartment are listed:	Euro: from 0 to 100% of net assets Others: from 0 to 100% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 100% of net assets(1)
Geographical area of issuers of securities to which the Compartment is exposed:	US: from 0 to 100% of net assets

(1) The equity classes that are not denominated in USD may however be exposed to currency risk.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the regulatory ratios, bonds issued by an OECD member country or by a non-governmental issuer resident in an OECD country.

The aforementioned securities will be bonds chosen on the basis of criteria:

- Of eligibility, in particular:

o Senior debt,

o Fixed maturity,

o Maximum residual maturity,

o Minimum issuing amount,

o Requirement of a minimal threshold in S&P rating or equivalent.

- Of diversification, in particular:

o Issuer (application of ratios applicable to the eligible assets of an UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),

o Geographical area,

o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives guarantee in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None.

The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received will not be sold, reinvested or pledged.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of Future Financial Instruments ("FFI") traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator. When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Risk of daily readjustment of the leverage

Investors are doubly inversely exposed to the fluctuations affecting the price or level of the underlying CBOT 10y US Treasury futures at the Benchmark Indicator on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will entail an even higher depreciation of the Compartment's net asset value.

The daily readjustment of the exposure shown in the formula of the underlying "double short" Benchmark Indicator implies that, over a period of more than one banking day, the Compartment's performance will not be equal to the double of the opposite of the performance of the underlying CBOT 10y US Treasury futures at the Benchmark Indicator. For example, if the underlying CBOT 10y US Treasury futures of the Benchmark Indicator appreciate by 10% on one banking day and then depreciate by 5% on the next banking day, the Compartment will have depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the underlying CBOT 10y US Treasury futures of the Benchmark Indicator will have appreciated by 4.5% over the same period.

If the underlying CBOT 10y US Treasury futures of the Benchmark Indicator depreciate by 10% a given banking day then is appreciate by 6% the next banking day, they will have depreciated by a total of 4.6%, while the Compartment will be appreciated (before deduction of the applicable fees) by 5.6% over the same period.

Negative scenario 1: Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Benchmark Indicator's underlying

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
Whole period	**4.50%**		**-12.00%**		**x-2.67**

Negative scenario 2: Case in which the resulting negative leverage is less than 2 within the scenario of a decrease of the Benchmark Indicator's underlying

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
Whole period	**-4.60%**		**5.60%**		**x-1.22**

Moreover, it is possible that over an observation period of more than one day, and in case of strong volatility of the Benchmark Indicator's underlyings over this period, the Compartment's net asset value will decline even if the Benchmark Indicator's underlyings also show a decrease over this same period.

Inverted leverage scenario 3: Case in which the resulting leverage is positive over the period

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
Whole period	**-0.25%**		**-1.00%**		**x4**

Risk that the Compartment's management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Risk related to low diversification

The Benchmark Indicator to which the investors are exposed only covers the market for bonds issued by the US government and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

Credit risk

It represents the potential risk of improvement of the issuer credit quality that could notably led to an improvement of the rating assigned by rating agencies to the issuer, which would have a positive impact on the price of the issuer's bonds and thus have a negative impact on the net asset value of the Compartment. The Compartment is exposed to the credit risk of the US government.

Exchange risk linked to the C-EUR and D-EUR equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Eligible subscribers and typical investor profile: The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure with a daily amplifying x2 leverage, upward or downward, to the US government bonds market while reproducing the evolution of the Benchmark Indicator.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As this product is an arbitration product, this Compartment could not be suitable for investors that wish to make a medium or long-term investment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

Activity report

The net asset value of the C-USD unit of the LYXOR UCITS ETF DAILY DOUBLE SHORT 10Y US TREASURY Compartment shows an evolution of -6.68%* over the fiscal year and stands at EUR 83.8256 on 30/10/2015, meaning a fund performance of -16.17% since inception.

The fund replicates the performance of the SGI DoublShrt- 10yUSTrea index, listed in US Dollar (USD), representing a bearish strategy with a leverage effect of 2 on American government bonds with a maturity of close to 10 years.

This index has shown an evolution of -6.42% over the fiscal year. As the C-USD class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the USD increased by 7.64% compared to the JPY.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the SGI DoublShrt- 10yUSTrea index, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the SGI DoublShrt- 10yUSTrea index.

The equities held as assets by the Compartment will notably be equities that make up the SGI DoublShrt- 10yUSTrea index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0020% for the Compartment. The level of the tracking error for the period was of 0.07%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.20% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in USD.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

appendix

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Classes C-EUR and C-USD: Capitalisation of all the amounts available for distribution.

Classes D-EUR and D-USD: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Diversified.

The lyxor UCITS etf daily double short 10Y UK GILTS Compartment (hereafter the "Compartment") is an UCITS ETF strategy type index fund.

Terms of determination and allocation of amounts available for distribution:

Classes C-GBP, C-EUR and C-USD: Capitalisation of all the amounts available for distribution.

Classes D-GBP, D-EUR and D-USD: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of the Compartment is to be inversely exposed with a daily x2 leverage, upward or downward, to the daily performance of the British Government bonds market while reproducing the evolution of the "SGI Double Short - 10Y GILT" (Bloomberg Code: SGIXDSGI) index (see the "Benchmark Indicator" hereafter) while insofar as possible minimizing the tracking error between the Compartment's performances and those of the "SGI Double Short - 10Y GILT" index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.07%.

Benchmark indicator:

The Benchmark Indicator is the SGI Double Short - 10Y GILT strategy index, listed in GBP (the "Benchmark Indicator").

The Benchmark Indicator is a strategy index prepared by the Société Générale research teams, using a proprietary methodology. The Benchmark Indicator is calculated and maintained by Standard & Poor's.

The Benchmark Indicator is a total return index that reflects the overall return over a period of time relative to the composite performance of a notional investment in the following:

- A series of "10Y British Government Bonds (GILTS), listed in GBP" futures,

- And a Bank of England's effective money-market rate.

The Benchmark Indicator offers inverse exposure, with daily 200% inverse leverage, to increases and decreases in futures contracts on UK government bonds with 10-year maturity and denominated in GBP. The Benchmark Indicator is therefore correlated with the performance of:

- A notional short position in "10Y British Government Bonds (GILTS), listed in GBP" futures that are closest to their expiry date, to which 200% leverage is applied,

and

- A long position in a daily investment that is representative of the interest earned on an overnight deposit that is indexed at the Bank of England's effective bank rate.

Therefore if the value of "10Y British Government Bonds (GILTS), listed in GBP" futures declines on a Calculation Date (as this term is defined below), the Compartment's net asset value will increase by twice this amount on this Calculation Date and, inversely will decrease by twice as much if the price of "10Y British Government Bonds (GILTS), listed in GBP" futures rises, in which case shareholders will not benefit from the increase in the Benchmark Indicator.

The notional amount of the two investments in the "10Y British Government Bonds (GILTS), listed in GBP" futures and in the overnight deposit is revised daily in accordance with the Benchmark Indicator's most recent performance.

The Benchmark Indicator's daily performance is therefore equivalent to the inverse of twice the daily performance of "10Y GBP Denominated British Government Bonds (GILTS), listed in GBP" futures plus the interest (Bank of England) received daily on the value of the "10Y GBP Denominated British Government Bonds (GILTS), listed in GBP" futures at the previous day's fixing price at 5:30 pm.

The leveraged position in a series of suitable futures contracts is rolled over to the next series of futures contracts at each revision date (as this term is defined below). The series of futures contracts is not modified between Revision Dates.

A "Revision Date" is the first business day immediately before the expiry date of a given series of futures contracts.

The Benchmark Indicator is calculated and published by Standard & Poor's Financial services LLC ("S&P") in accordance with the Benchmark Indicator methodology.

The composition of the Benchmark Indicator is revised quarterly.

The complete methodology is available at www.sgindex.fr

The monitored performance is that of the Benchmark Indicator's closing price at 5:30 p.m.

As the Benchmark Indicator's calculation methodology is not based on a direct exposure to the 10Y British Government bonds, but is rather based on an indirect exposure via futures contracts, the Compartment's performance will be impacted by the cost related to the roll of the aforesaid futures on a quarterly basis.

This phenomenon could negatively and progressively impact, potentially in a significant manner, the gap between the Compartment's performance and the gross performance of the short positions on the underlyings of the aforesaid futures, notably in case of long-term investment in the Compartment's equities.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised quarterly in accordance with the methodology described in full on SGIndex's website: www.sgindex.fr.

The Benchmark Indicator's leverage may also be adjusted intraday during trading hours if it falls by more than 40% on a Benchmark Indicator Calculation Day (i.e. if the absolute value of "10Y GBP Denominated British Government Bonds (GILTS), listed in GBP" futures rises by more than 20%.

This frequency of the index rebalancing described above and the rolling over of the futures contracts at the Revision Dates could increase the Compartment's costs and therefore adversely affect the Compartment's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator are available at the following Internet site: www.sgindex.fr

Benchmark Indicator publication

The Benchmark Indicator is calculated daily at the 5:30 pm fixing price for "10Y British Government Bonds (GILTS), listed in GBP" futures.

The Benchmark Indicator is also calculated in real time every business day in France provided that the stock markets on which the Benchmark Indicator underlying components are listed are open, hereinafter a "Benchmark Indicator Calculation Day".

The Benchmark Indicator is available via Reuters and Bloomberg.

Reuters code: .SGIXDSGI

Bloomberg code: SGIXDSGI

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective.

These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

An investor subscribing to this Compartment is inversely exposed with a daily amplifying x2 leverage, upward or downward, to the daily performance of the British Government bond market for which the Benchmark Indicator is a representative indicator.

The securities held as assets by the Compartment will mainly be bonds issued by a Member State of the OECD or issued by non-government issuers residing in one of the Member States of the OECD.

The bonds basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

Interest rate sensitivity range within which the CIU is managed:	Between 8 and 12
Currencies in which securities held by the Compartment are listed:	Euro: from 0 to 100% of net assets Others: from 0 to 100% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 100% of net assets(1)
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: UK: from 0 to 100% of net assets

(1) The equity classes that are not denominated in GBP may however be exposed to currency risk.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the regulatory ratios, bonds issued by an OECD member country or by a non-governmental issuer resident in an OECD country.

The aforementioned securities will be bonds chosen on the basis of criteria:

- Of eligibility, in particular:

o Senior debt,

o Fixed maturity,

o Maximum residual maturity,

o Minimum issuing amount,

o Requirement of a minimal threshold in S&P rating or equivalent.

- Of diversification, in particular:

o Issuer (application of ratios applicable to the eligible assets of an UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),

o Geographical area,

o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None.

The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

- They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

- They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

- They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

- The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong;

- and such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(a) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(b) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(c) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(d) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(e) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(f) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received will not be sold, reinvested or pledged.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of Future Financial Instruments ("FFI") traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator. When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

Risk of daily readjustment of the leverage

Investors are doubly inversely exposed to the fluctuations affecting the price or level of the underlying "10Y British Government Bonds (GILTS), listed in GBP" futures at the Benchmark Indicator on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will entail an even higher depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" Benchmark Indicator implies that, over a period of more than one banking day, the Compartment's performance will not be equal to the double of the opposite of the performance of the underlying "10Y British Government Bonds (GILTS), listed in GBP" futures at the Benchmark Indicator.

For example, if the underlying "10Y British Government Bonds (GILTS), listed in GBP" futures of the Benchmark Indicator appreciate by 10% on one banking day and then depreciate by 5% on the next banking day, the Compartment will have depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the underlying "10Y British Government Bonds (GILTS), listed in GBP" futures of the Benchmark Indicator will have appreciated by 4.5% over the same period.

If the underlying "10Y British Government Bonds (GILTS), listed in GBP" futures of the Benchmark Indicator depreciate by 10% a given banking day then is appreciate by 6% the next banking day, they will have depreciated by a total of 4.6%, while the Compartment will be appreciated (before deduction of the applicable fees) by 5.6% over the same period.

Negative scenario 1: Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Benchmark Indicator's underlying

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
Whole period	**4.50%**		**-12.00%**		**x-2.67**

Negative scenario 2: Case in which the resulting negative leverage is less than 2 within the scenario of a decrease of the Benchmark Indicator's underlying

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
Whole period	**-4.60%**		**5.60%**		**x-1.22**

Moreover, it is possible that over an observation period of more than one day, and in case of strong volatility of the Benchmark Indicator's underlyings over this period, the Compartment's net asset value will decline even if the Benchmark Indicator's underlyings also show a decrease over this same period.

Inverted leverage scenario 3: Case in which the resulting leverage is positive over the period

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
Whole period	**-0.25%**		**-1.00%**		**x4**

Risk that the Compartment's management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Risk related to low diversification

The Benchmark Indicator to which the investors are exposed only covers the market for bonds issued by the British government and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

Credit risk

It represents the potential risk of improvement of the issuer credit quality that could notably led to an improvement of the rating assigned by rating agencies to the issuer, which would have a positive impact on the price of the issuer's bonds and thus have a negative impact on the net asset value of the Compartment. The Compartment is exposed to the credit risk of the British government.

Exchange risk linked to the C-EUR, D-EUR, C-USD and D-USD equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure with a daily amplifying x2 leverage, upward or downward, to the British government bonds market while reproducing the evolution of the Benchmark Indicator.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As this product is an arbitration product, this Compartment could not be suitable for investors that wish to make a medium or long-term investment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *Compartment creation date: 8 January 2014.*

Activity report

The net asset value of the C-GBP unit of the LYXOR UCITS ETF DAILY DOUBLE SHORT 10Y UK GILTS Compartment shows an evolution of -10.92%* over the fiscal year and stands at GBP 72.8409 on 30/10/2015, meaning a fund performance of -27.16% since inception.

The fund replicates the performance of the SGIDoubleShortLongGilts index, listed pound sterling (GBP), representing a bearish strategy with a leverage effect of 2 on British government bonds with a maturity of close to 10 years.

This index has shown an evolution of -10.67% over the fiscal year. As the C-USD class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the USD increased by 7.64% compared to the JPY.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the SGIDoubleShortLongGilts index, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the SGIDoubleShortLongGilts index.

The equities held as assets by the Compartment will notably be equities that make up the SGIDoubleShortLongGilts index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0030% for the Compartment. The level of the tracking error for the period was of 0.07%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.20% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in GBP.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Diversified.

The LYXOR UCITS ETF DAILY DOUBLE SHORT 10Y JAPAN GOVT BONDS Compartment (hereafter the "Compartment") is an UCITS ETF strategy type index fund.

Terms of determination and allocation of amounts available for distribution:

Classes C-EUR and C-USD: Capitalisation of all the amounts available for distribution.

Classes D-EUR and D-USD: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of the Compartment is to be inversely exposed with a daily x2 leverage, upward or downward, to the daily performance of the Japanese government bonds market while reproducing the evolution of the "SGI Double Short - 10Y JGB" (Bloomberg Code: SGIXDSJB) index (see the "Benchmark Indicator" hereafter) while insofar as possible minimizing the tracking error between the Compartment's performances and those of the "SGI Double Short - 10Y JGB" index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.07%.

Benchmark indicator:

The Benchmark Indicator is the SGI Double Short - 10Y JGB strategy index, listed in Yen (the "Benchmark Indicator").

The Benchmark Indicator is a strategy index prepared by the Société Générale research teams, using a proprietary methodology. The Benchmark Indicator is calculated and maintained by Standard & Poor's.

The Benchmark Indicator is a total return index that reflects the overall return over a period of time relative to the composite performance of a notional investment in the following:

- A series of "10Y Japanese Government Bond (JGB)" futures,

- And a Bank of Japan's effective money-market rate.

The Benchmark Indicator offers inverse exposure, with daily 200% inverse leverage, to increases and decreases on futures contracts on 10 years Japanese government bonds. The Benchmark Indicator is therefore correlated with the performance of:

- A notional short position in "10Y Japanese Government Bonds (JGB)" futures that are closest to their expiry date, to which 200% leverage is applied, and a long position in a daily investment that is representative of the interest earned on an overnight deposit that is indexed at the "spot/next JPY Libor Rate".

Therefore if the value of 10Y Japanese Government Bonds (JGB) futures declines on a Calculation Date (as this term is defined below), the Compartment's net asset value will increase by twice this amount on this Calculation Date and, inversely will decrease by twice as much if the price of 10Y Japanese Government Bonds (JGB) futures rises, in which case shareholders will not benefit from the increase in the Benchmark Indicator.

The notional amount of the two investments in the 10Y Japanese Government Bond (JGB) futures and in the overnight deposit is revised daily in accordance with the Benchmark Indicator's most recent performance.

The Benchmark Indicator's daily performance is therefore equivalent to the inverse of twice the daily performance of 10Y Japanese Government Bond (JGB) futures plus the interest at the Bank of Japan rate received daily on the value of the 10Y Japanese Government Bond (JGB) futures at the previous day's fixing price at 5:30 pm.

The leveraged position in a series of suitable futures contracts is rolled over to the next series of futures contracts at each revision date (as this term is defined below). The series of futures contracts is not modified between Revision Dates.

A "Revision Date" is the first business day immediately before the expiry date of a given series of futures contracts. The Benchmark Indicator is calculated and published by Standard & Poor's Financial services LLC ("S&P") in accordance with the Benchmark Indicator methodology.

The composition of the Benchmark Indicator is revised quarterly. The complete methodology is available at www.sgindex.fr

The monitored performance is that of the Benchmark Indicator's closing price at 5:30 p.m.

As the Benchmark Indicator's calculation methodology is not based on a direct exposure to the 10Y Japanese government bonds, but is rather based on an indirect exposure via futures contracts, the Compartment's performance will be impacted by the cost related to the roll of the aforesaid futures on a quarterly basis.

This phenomenon could negatively and progressively impact, potentially in a significant manner, the gap between the Compartment's performance and the gross performance of the short positions on the underlyings of the aforesaid futures, notably in case of long-term investment in the Compartment's equities.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised quarterly in accordance with the methodology described in full on SGIndex's website: www.sgindex.fr.

The Benchmark Indicator's leverage may also be adjusted intraday during trading hours if it falls by more than 40% on a Benchmark Indicator Calculation Day (i.e. if the absolute value of 10Y Japanese Government Bond (JGB) futures rises by more than 20%.

This frequency of the index rebalancing described above and the rolling over of the futures contracts at the Revision Dates could increase the Compartment's costs and therefore adversely affect the Compartment's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator are available at the following Internet site: www.sgindex.fr

The Benchmark Indicator's revision depends on that of the 10Y Japanese Government Bonds (JGB) futures.

Benchmark Indicator publication

The Benchmark Indicator is calculated daily at the 5:30 pm fixing price for 10Y Japanese Government Bond (JGB) futures.

The Benchmark Indicator is also calculated in real time every business day in France provided that the stock markets on which the Benchmark Indicator underlying components are listed are open, hereinafter a "Benchmark Indicator Calculation Day".

The Benchmark Indicator is available via Reuters and Bloomberg.

Reuters code: .SGIXDSJB Bloomberg code: SGIXDSJB

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

An investor subscribing to this Compartment is inversely exposed with a daily amplifying x2 leverage, upward or downward, to the daily performance of the Japanese government bond market for which the Benchmark Indicator is a representative indicator.

The securities held as assets by the Compartment will mainly be bonds issued by a Member State of the OECD or issued by non-government issuers residing in one of the Member States of the OECD.

The bonds basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

Interest rate sensitivity range within which the CIU is managed:	Between 8 and 12
Currencies in which securities held by the Compartment are listed:	Euro: from 0 to 100% of net assets Others: from 0 to 100% of net assets
Level of foreign exchange risk borne by the Compartment:	From 0 to 100% of net assets(1)
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Japan: from 0 to 100% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the regulatory ratios, bonds issued by an OECD member country or by a non-governmental issuer resident in an OECD country.

The aforementioned securities will be bonds chosen on the basis of criteria:

- Of eligibility, in particular:

o Senior debt,

o Fixed maturity,

o Maximum residual maturity,

o Minimum issuing amount,

o Requirement of a minimal threshold in S&P rating or equivalent.

- Of diversification, in particular:

o Issuer (application of ratios applicable to the eligible assets of an UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),

o Geographical area,

o Sector.

For more information on the abovementioned eligibility and diversification criteria, including on the eligible indices list, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives guarantee in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the securities held as assets by the Compartment (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None.

The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

The financial guarantees received will not be sold, reinvested or pledged.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of Future Financial Instruments ("FFI") traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator. When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

Risk of daily readjustment of the leverage

Investors are doubly inversely exposed to the fluctuations affecting the price or level of the underlying 10Y Japanese Government Bond futures at the Benchmark Indicator on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will entail an even higher depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" Benchmark Indicator implies that, over a period of more than one banking day, the Compartment's performance will not be equal to the double of the opposite of the performance of the underlying 10Y Japanese Government Bond futures at the Benchmark Indicator. For example, if the underlying 10Y Japanese Government Bond futures of the Benchmark Indicator appreciate by 10% on one banking day and then depreciate by 5% on the next banking day, the Compartment will have depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the underlying 10Y Japanese Government Bond futures of the Benchmark Indicator will have appreciated by 4.5% over the same period.

If the underlying 10Y Japanese Government Bond futures of the Benchmark Indicator depreciate by 10% a given banking day then is appreciate by 6% the next banking day, they will have depreciated by a total of 4.6%, while the Compartment will be appreciated (before deduction of the applicable fees) by 5.6% over the same period.

Negative scenario 1:
Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Benchmark Indicator's underlying

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	10%	110	-20%	80	x-2
day 2	-5%	104.5	10%	88	x-2
Whole period	**4.50%**		**-12.00%**		**x-2.67**

Negative scenario 2:
Case in which the resulting negative leverage is less than 2 within the scenario of a decrease of the Benchmark Indicator's underlying

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	-10%	90	20%	120	x-2
day 2	6%	95.4	-12%	105.6	x-2
Whole period	**-4.60%**		**5.60%**		**x-1.22**

Moreover, it is possible that over an observation period of more than one day, and in case of strong volatility of the Benchmark Indicator's underlyings over this period, the Compartment's net asset value will decline even if the Benchmark Indicator's underlyings also show a decrease over this same period.

Inverted leverage scenario 3:
Case in which the resulting leverage is positive over the period

	Underlying of the Benchmark Indicator		Strategy index		induced leverage
	performance day i	Day value i	performance day i	Day value i	
		100		100	
day 1	5%	105	-10%	90	x-2
day 2	-5%	99.75	10%	99	x-2
Whole period	**-0.25%**		**-1.00%**		**x4**

Risk that the Compartment's management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Risk related to low diversification

The Benchmark Indicator to which the investors are exposed only covers the market for bonds issued by the Japanese government and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Credit risk

It represents the potential risk of improvement of the issuer credit quality that could notably led to an improvement of the rating assigned by rating agencies to the issuer, which would have a positive impact on the price of the issuer's bonds and thus have a negative impact on the net asset value of the Compartment. The Compartment is exposed to the credit risk of the Japanese government.

- Exchange risk linked to the C-USD, D-USD, C-EUR and D-EUR equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure with a daily amplifying x2 leverage, upward or downward, to the Japanese government bonds market while reproducing the evolution of the Benchmark Indicator.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As this product is an arbitration product, this Compartment could not be suitable for investors that wish to make a medium or long-term investment.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 10 December 2013.*
- *Compartment creation date: 8 January 2014.*

Activity report

The net asset value of the C-USD unit of the LYXOR UCITS ETF DAILY DOUBLE SHORT 10Y JAPAN GOVT BONDS Compartment shows an evolution of -10.61%* over the fiscal year and stands at EUR 80.042 on 30/10/2015, meaning a fund performance of -19.96% since inception.

The fund replicates the performance of the SGIDoubleShort10YJGB index, listed in Japanese yen (JPY), representing a bearish strategy with a leverage effect of 2 on Japanese government bonds with a maturity of close to 10 years.

This index has shown an evolution of -3.50% over the fiscal year. As the C-USD class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the USD increased by 7.64% compared to the JPY.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the SGIDoubleShort10YJGB index, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the SGIDoubleShort10YJGB index.

The equities held as assets by the Compartment will notably be equities that make up the SGIDoubleShort10YJGB index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 4 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0410% for the Compartment. The level of the tracking error for the period was of 0.07%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.20% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU or AIF.

Accounting currency

The Compartment's accounting is carried out in USD.

Compartments / feeder	LYXOR UCITS ETF FTSE ITALIA MID CAP is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of eurozone countries.

At least 60% of the LYXOR UCITS ETF FTSE ITALIA MID CAP Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several eurozone countries including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "FTSE Italia Mid cap Index" (Bloomberg code: ITMCN index) (the "Benchmark Indicator") listed in EUR and representing the performance of the equities of medium-capitalisation listed on Borsa Italiana.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator:

The Benchmark Indicator is the FTSE Italia Mid cap Index listed in Euro (EUR) (the "Benchmark Indicator").

The Benchmark Indicator is representative of the performance of the equities mid-cap listed on the Borsa Italiana and is composed of the 60 stocks with the highest ratings in terms of market capitalisation and liquidity.

The Benchmark Indicator is a free float-adjusted capitalisation-weighted index designed to measure the stock-market performance of the mid-cap equities listed on the Borsa Italiana exchange, excluding foreign securities and secondary trading lines. The universe of eligible securities is determined on the basis of their free float-adjusted market capitalisation and a liquidity criterion defined by the median value of the monthly trading value.

Each Benchmark Indicator component is capped at 10% at each quarterly rebalancing. The weight of any component that exceeds 10% will be reduced to 10%.

The Benchmark Indicator is rebalanced quarterly, in March, June, September and December.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the Internet site: www.ftse.com.

Benchmark indicator revision and composition

The Benchmark Indicator is rebalanced quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by FTSE and available on the Internet site: www.ftse.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .TRIITMCN

Bloomberg code: ITMCN index.

The Benchmark Indicator's closing price is available on the Internet site: www.ftse.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equities of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager by delegation reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of future financial instrument ("FFI") traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk of investing in mid-cap companies

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the equities market of medium-capitalisation listed on Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 7 March 2014.*
- *Compartment creation date: 28 March 2014.*

Activity report

The net asset value of the D-EUR unit of the LYXOR UCITS ETF FTSE ITALIA MID CAP Compartment shows an evolution of 38.08%* over the fiscal year and stands at EUR 110.0493 on 30/10/2015, meaning a fund performance of 14.83% since inception.

The fund replicates the performance of the FTSE ITMCN INDEX, listed in euros (EUR), representative of an investment strategy in Italian mid-caps.

This index has shown an evolution of 38.72% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the FTSE ITMCN INDEX, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the FTSE ITMCN INDEX.

The equities held as assets by the Compartment will notably be equities that make up the FTSE ITMCN INDEX, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0440% for the Compartment. The level of the tracking error for the period was of 0.08%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.50% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Unit capitalisation [(2)]	**23,34**	-16,95	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 28 March 2014.

Compartments / feeder	LYXOR UCITS ETF MSCI EUROPE SMALL CAP is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of European Union Countries.

At least 60% of the LYXOR UCITS ETF MSCI EUROPE SMALL CAP Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several European Union countries including any eurozone markets.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "MSCI Europe Small Cap Index" (Bloomberg code: M7EUSC Index) (the "Benchmark Indicator") listed in EUR and representing the equities of European small-cap companies in 15 developed markets: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

Benchmark indicator:

The Benchmark Indicator is the MSCI Europe Small Cap Index, listed in EUR.

The Benchmark Indicator represents the performance of equities of European small-cap companies in 15 developed markets: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

The Benchmark Indicator is calculated by MSCI Inc.

The Benchmark Indicator is a free float-adjusted capitalisation-weighted index, designed to measure the performance of Equities of European small-cap companies in 15 developed markets: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

The investment universe is limited to relatively small companies with market capitalisation ranging from 266 million to 4.973 million USD.

The Benchmark Indicator employs the MSCI Global Investable Market Indices (GIMI) methodology, which provides a consistent approach to index construction with both a global and a regional perspective, among all market capitalisation, economic sectors and investment styles.

This methodology aims to encompass all investment opportunities, while bringing to the fore the Benchmark Indicator's liquidity, investability and replicability. These criteria are assessed using two relevant indicators: the annual traded value ratio (ATVR) of the securities, which is their monthly median trading volume divided by their free float, and the 3-month trading frequency.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the MSCI Internet site: www.msci.com

Benchmark indicator revision and composition

The Benchmark Indicator is rebalanced quarterly, in February, May, August and November.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.msci.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .MIEU000S0NEU Bloomberg code: M7EUSC Index

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.msci.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- Geographical area,
- Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager by delegation reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk of investing in small and mid-cap companies

Le Compartment is exposed to small-capitalisation companies and more specifically to the equity securities of small and medium enterprise (SME), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Exchange risk linked to the index

The Compartment is exposed to an exchange risk to the extent that the underlying securities comprising the Benchmark Indicator could be listed in a currency other than that of the index, or be derivatives of securities listed in a currency other than that of the index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the equities market of European small-cap companies.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *Compartment creation date: 25 March 2014.*

Activity report

The net asset value of the D-EUR unit of the LYXOR UCITS ETF MSCI EUROPE SMALL CAP Compartment shows an evolution of 26.88%* over the fiscal year and stands at EUR 121.5948 on 30/10/2015, meaning a fund performance of 24.51% since inception.

The fund replicates the performance of the MSCI EUROPE SM CAP NR index, listed in euros (EUR), representative of an investment strategy in paneuropeans small-cap.

This index has shown an evolution of 26.85% over the fiscal year. As the C-EUR class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% compared to the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI EUROPE SM CAP NR index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI EUROPE SM CAP NR index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI EUROPE SM CAP NR index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0000% for the Compartment. The level of the tracking error for the period was of 0.1%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Operating and management fees including tax (1)	Net assets	maximum 0.40% per year
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.

Other operations	6 830 000,00	-	-	-	-

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items
This breakdown is given for the main listing or assessment currencies, with the exception of the currency in which the accounting is maintained.

By main currency	CHF	JPY	DKK	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	875 190,57	524 351,87	468 864,75	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet	-	-	-	-
Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type
Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	-
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
-	-
-	-
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**2 655,41**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Accrued expenses	2 655,41
-	-
-	-
-	-
-	-
Other operations	-

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	55 300	6 691 529,48	89 000	9 854 326,80
Subscription / redemption commission		-		-
Remittances		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**0,40**
Performance commissions (variable fees): amount of costs for the fiscal year	**-**
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	**-**
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**
3.8.2 Description of the other commitments received and/or given ..... **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	**-**
- Other temporary operations	**-**
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	**-**
- bonds	**-**
- debt securities	**-**
- other financial instruments	**-**
Financial estimates given as guarantees and maintained in their original item:	
- equities	**-**
- bonds	**-**
- debt securities	**-**
- other financial instruments	**-**
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
- CIU securities	**-**
- Swaps	**-167 667,97**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

currency EUR	**30.10.2015**	31.10.2014	-	-	-
Net assets	**8 304 929,07**	10 009 521,43	-	-	-
Number of outstanding equities	**68 300**	102 000	-	-	-
Net asset value	**121,5948**	98,1325	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**2,80**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**23,13**	2,35	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 25 March 2014.

Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of Euro zone countries.

At least 60% of the LYXOR UCITS ETF MSCI EMU MID CAP Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several Euro zone countries including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "MSCI EMU Mid Cap Index" (Bloomberg code: M7EMMC) (the "Benchmark Indicator") listed in EUR and representing the equities of medium-capitalisation companies in 10 Euro zone countries: Austria, Belgium, Finland, France, Germany, Ireland, Italy, Netherlands, Portugal and Spain. The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

Benchmark indicator:

The Benchmark Index is a free float-adjusted capitalisation-weighted index designed to measure the performance of equities of medium-capitalisation companies in 10 Euro zone countries: Austria, Belgium, Finland, France, Germany, Ireland, Italy, Netherlands, Portugal and Spain.

The Benchmark Indicator is calculated by MSCI Inc.

The investment universe is limited to relatively medium companies with market capitalisation ranging from 4,973 million to 14,991 million USD.

The Benchmark Indicator employs the MSCI Global Investable Market Indices (GIMI) methodology, which provides a consistent approach to index construction with both a global and a regional perspective, among all market capitalisation, economic sectors and investment styles.

This methodology aims to encompass all investment opportunities, while bringing to the fore the Benchmark Indicator's liquidity, investability and replicability. These criteria are assessed using two relevant indicators: the annual traded value ratio (ATVR) of the securities, which is their monthly median trading volume divided by their free float, and the 3-month trading frequency.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the MSCI Internet site: www.msci.com

Benchmark indicator revision and composition

The Benchmark Indicator is rebalanced quarterly, in February, May, August and November.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.msci.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .M7EMMC Bloomberg code: M7EMMC

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.msci.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,

- Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the equities held as assets by the Compartment (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager by delegation reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk of investing in mid-cap companies

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the equities market of European medium-cap companies.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*

Activity report

The net asset value of the D-EUR unit of the LYXOR UCITS ETF MSCI EMU MID CAP Compartment shows an evolution of 23.43%* over the fiscal year and stands at EUR 114.7182 on 30/10/2015, meaning a fund performance of 17.47% since inception.

The fund replicates the performance of the MSCI EMU MID CAP NR index, listed in euros (EUR), representative of an investment strategy in the eurozone mid cap.

This index has shown an evolution of 23.44% over the fiscal year. As the C-EUR class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% compared to the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI EMU MID CAP NR index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI EMU MID CAP NR index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI EMU MID CAP NR index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0000% for the Compartment. The level of the tracking error for the period was of 0.1%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Operating and management fees including tax (1)	Net assets	maximum 0.40% per year
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

currency EUR	**30.10.2015**	31.10.2014	-	-	-
Net assets	**6 301 128,23**	9 802 841,66	-	-	-
Number of outstanding equities	**54 927**	103 000	-	-	-
Net asset value	**114,7182**	95,1732	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**2,65**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**-18,85**	0,46	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 25 March 2014.

Compartments / feeder	LYXOR UCITS ETF MSCI EUROPE SMALL CAP is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of European Union Countries.

At least 60% of the LYXOR UCITS ETF MSCI EUROPE MID CAP Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several European Union countries including any eurozone markets.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "MSCI Europe Mid Cap Index" (Bloomberg code: M7EUMC Index) (the "Benchmark Indicator") listed in EUR and representing the equities of European medium-capitalisation companies in 15 developed markets: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

Benchmark indicator:

The Benchmark Indicator is a free float-adjusted capitalisation-weighted index designed to measure the performance of equities of European medium-capitalisation companies in 15 developed markets: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

The Benchmark Indicator is calculated by MSCI Inc.

The investment universe is limited to relatively medium companies with market capitalisation ranging from 4.973 million to 14.991 million USD.

The Benchmark Indicator employs the MSCI Global Investable Market Indices (GIMI) methodology, which provides a consistent approach to index construction with both a global and a regional perspective, among all market capitalisation, economic sectors and investment styles.

This methodology aims to encompass all investment opportunities, while bringing to the fore the index's liquidity, investability and replicability. These criteria are assessed using two relevant indicators: the annual traded value ratio (ATVR) of the securities, which is their monthly median trading volume divided by their free float, and the 3-month trading frequency.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the MSCI Internet site: www.msci.com

Benchmark indicator revision and composition

The Benchmark Indicator is rebalanced quarterly: in February, May, August and November.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI and available on the Internet site: www.msci.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .M7EUMC

Bloomberg code: M7EUMC

The Benchmark Indicator's closing price is available on the MSCI Internet site: www.msci.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),

- Geographical area,
- Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager by delegation reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk of investing in small and mid-cap companies

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Exchange risk linked to the index

The Compartment is exposed to an exchange risk to the extent that the underlying securities comprising the Benchmark Indicator could be listed in a currency other than that of the index, or be derivatives of securities listed in a currency other than that of the index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the equities market of European medium-cap companies.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*

- *Compartment creation date: 25 March 2014.*

Activity report

The net asset value of the D-EUR unit of the LYXOR UCITS ETF MSCI EUROPE MID CAP Compartment shows an evolution of 21.98%* over the fiscal year and stands at EUR 120.0432 on 30/10/2015, meaning a fund performance of 23.13% since inception.

The fund replicates the performance of the MSCI EUROPE MID CAP NR index, listed in euros (EUR), representative of an investment strategy in paneuropeans mid cap.

This index has shown an evolution of 21.90% over the fiscal year. As the C-EUR class is not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 11.83% compared to the USD.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI EUROPE MID CAP NR index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI EUROPE MID CAP NR index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI EUROPE MID CAP NR index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0070% for the Compartment. The level of the tracking error for the period was of 0.1%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Operating and management fees including tax (1)	Net assets	maximum 0.40% per year
Outperformance commissions	Net assets	None
Transactions commissions	xxxx	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.

Financial accounts	-	-	-	-
Off-balance sheet	-	-	-	-
Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type
Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	**49 643,60**
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Deferred settlement sales	49 643,60
-	-
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**51 873,69**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Account payable	49 643,60
Accrued expenses	2 230,09
-	-
-	-
-	-
Other operations	-

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	5 300	663 809,93	48 000	5 034 465,60
Subscription / redemption commission		-		-
Remittances		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**0,40**
Performance commissions (variable fees): amount of costs for the fiscal year	**-**
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	**-**
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**
3.8.2 Description of the other commitments received and/or given ..... **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
- CIU securities	-
- Swaps	**-116 543,90**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

Advances paid during the fiscal year

Compartments / feeder	LYXOR UCITS ETF IBEX MID is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of eurozone countries.

At least 60% of the LYXOR UCITS ETF IBEX MID Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several eurozone countries including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "IBEX Medium Cap Net return" index (Bloomberg code: IBEXCN) (see the "Benchmark Indicator" section hereafter) listed in EUR and representing the performance of the 20 mid-cap stocks listed on the "prime" segment of the Madrid stock exchange.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator: The Benchmark Indicator is the IBEX Medium Cap Net return index, listed in Euro (EUR) (the "Benchmark Indicator").

The Benchmark Indicator represents the performance of the 20 mid-cap stocks listed on the "prime" segment of the Madrid stock exchange that come immediately after the 35 stocks that comprise the IBEX 35® index in terms of market capitalisation and liquidity.

The index is calculated by Bolsa de Madrid.

The Benchmark Indicator is weighted by float-adjusted market capitalisation. It represents the performance of the 20 mid-cap stocks listed on the "Trading Market" segment of the Madrid stock exchange (the Spanish Stock Exchange Interconnection System) which have the largest float-adjusted market capitalisation, after the 35 stocks that comprise the IBEX 35® index.

The eligibility of each index component is determined by its float-adjusted market capitalisation, using with the following criteria:

- An annual trading turnover ratio above 15%,
- More than 15% free float.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the Internet site: www.bolsamadrid.es.

Benchmark indicator revision and composition

The Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by the "Bolsa de Madrid" available on the Internet site: www.bolsamadrid.es.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .IBEXCN Bloomberg code: IBEXCN

The Benchmark Indicator's closing price is available on the Internet site: www.bolsamadrid.es.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the equities held as assets by the Compartment (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager by delegation reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of future financial instrument ("FFI") traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk of investing in mid-cap companies

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the equities of mid-cap companies listed on the "Prime" segment of the Madrid stock exchange.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. Activity report

The net asset value of the D-EUR unit of the LYXOR UCITS ETF IBEX MID Compartment shows an evolution of 18.58%* over the fiscal year and stands at EUR 107.9035 on 30/10/2015, meaning a fund performance of 10.71% since inception.

The fund replicates the performance of the IBXMEDIUM NR index, listed in euros (EUR), representative of an investment strategy in Spanish mid-caps.

This index has shown an evolution of 18.82% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the IBXMEDIUM NR index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the IBXMEDIUM NR index.

The equities held as assets by the Compartment will notably be equities that make up the IBXMEDIUM NR index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0200% for the Compartment. The level of the tracking error for the period was of 0.08%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.50% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

currency EUR	**30.10.2015**	31.10.2014	-	-	-
Net assets	**28 840 147,39**	13 070 691,27	-	-	-
Number of outstanding equities	**267 277**	140 000	-	-	-
Net asset value	**107,9035**	93,362	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**2,70**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**4,41**	3,90	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 15 May 2014.

Compartments / feeder	LYXOR UCITS ETF GERMAN MID-CAP MDAX is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of eurozone countries.

At least 60% of the LYXOR UCITS ETF GERMAN MID-CAP MDAX Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several eurozone countries including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The management objective of this Compartment is to replicate the upward or downward evolution of the "Mid Cap DAX Index" (Bloomberg code: MDAX), listed in EUR and 50 German mid-cap companies listed on the first segment of the Deutsche Boerse.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator:

The Benchmark Indicator is the Mid Cap DAX Index, listed in EUR (the "Benchmark Indicator").

The Benchmark Indicator represents the performance of the 50 mid-cap stocks listed on the first segment of the German stock exchange (Deutsche Boerse), which follow the 30 stocks that comprise the DAX 30 index, in terms of market capitalisation and liquidity. The Benchmark Indicator is calculated by Deutsche Börse AG

The Benchmark Indicator is weighted by float-adjusted market capitalisation and is designed to measure the share price performance of the 50 mid-cap stocks listed on the first segment of the German stock exchange (Deutsche Boerse), which have the largest float-adjusted market capitalisation, after excluding the 30 stocks that comprise the DAX 30 index.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components is available on the Deutsche Börse AG Internet site: www.dax-indices.com

Benchmark indicator revision and composition

The composition of the Benchmark Indicator is reviewed quarterly.

Each Benchmark Indicator is weighted by its float-adjusted market capitalisation, with the weight of each component being capped at 10% when the index is rebalanced. The float-adjusted market capitalisation is the market value of the securities issued and available for trading.

The exact composition and the revision rules of the Benchmark Indicator are published by Deutsche Börse AG and available on the Internet site: www.dax-indices.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .MDAXI Bloomberg code: MDAX

The Benchmark Indicator's closing price is available on the Deutsche Börse AG Internet site: www.dax-indices.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equities of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com.

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager by delegation reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties. As a result, the Management Company will not commit to a formal, traceable and verifiable procedure for open competition between the counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of future financial instrument ("FFI") traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk of investing in mid-cap companies

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure t to the equities of German mid-cap companies.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*

- *Compartment creation date: 15May 2014.*

Activity report

The net asset value of the D-EUR unit of the LYXOR UCITS ETF GERMAN MID-CAP MDAX Compartment shows an evolution of 30.62%* over the fiscal year and stands at EUR 125.1254 on 30/10/2015, meaning a fund performance of 28.50% since inception.

The fund replicates the performance of the MDAX PERF INDEX, listed in euros (EUR), representative of an investment strategy in German mid-caps.

This index has shown an evolution of 31.24% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MDAX PERF INDEX, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MDAX PERF INDEX.

The equities held as assets by the Compartment will notably be equities that make up the MDAX PERF INDEX, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0310% for the Compartment. The level of the tracking error for the period was of 0.08%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.4% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

This financial instrument is not sponsored, recommended, distributed or otherwise supported by Deutsche Börse AG (the "Licensor"). The Licensor grants no guarantee and issues no statement, whether explicit or implicit, regarding the results arising from use of the index and/or the index's registered trademark, or the value of the index at any given time or date, or regarding any other matter. The Index is calculated and published by the Licensor. However, within the limits of the law, the Licensor shall not be liable to all and any third parties in the event of potential errors in the Index. Moreover, the Licensor is under no obligation to report potential errors in the Index to any third parties, including investors.
Neither the publication of the Index by the Licensor, nor the license granted for the Index and its registered trademark for use with the financial instrument or other securities or financial products arising from the index amount to a recommendation by the Licensor for capital investment, nor do they carry, in any way, a guarantee or opinion from the Licensor concerning the advisability of investing in this product.
In its capacity as sole holder of all the rights relating to the Index and the Index's registered trademark, the Licensor has only granted to the financial instrument's issuer the right to use the Index and the Index's registered trademark, together with all and any reference to the Index and its registered trademark in relation to the financial instrument.

2. Evolution of the net assets

	30.10.2015	31.10.2014
Currency	EUR	EUR
Net assets at the start of the fiscal year	**10 330 282,31**	-
Subscriptions (including subscription commission acquired by the Compartment)	11 139 358,87	14 273 000,00

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

currency EUR	**30.10.2015**	31.10.2014	-	-	-
Net assets	**10 996 025,55**	10 330 282,31	-	-	-
Number of outstanding equities	**87 880**	105 000	-	-	-
Net asset value	**125,1254**	98,3836	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**3,10**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**50,25**	5,11	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 15 May 2014.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the LYXOR FORTUNE SG UCITS ETF MSCI CHINA A (DR) Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index Compartment.

Terms of determination and allocation of incomes:

Income capitalisation.

Management objective:

The Compartment's management objective is to replicate the evolution, upward or downward, of the MSCI China A Net Total Return Index (see the "Benchmark Indicator" section hereafter) regardless of its evolution, while insofar as possible minimizing the tracking error between the Compartment's performances and those of the MSCI China A Net Total Return index.

The anticipated level of the ex-post tracking error under normal market conditions is 2%.

The attention of investors is drawn to the risks incurred specifically from investing in the People's Republic of China (PRC), as described in greater detail in the Risk Profile section below.

It should in particular be noted that there are some uncertainties as to the capital gains on the sale of "A-shares". On 14 November 2014, the PRC Ministry of Finance and tax authority issued circulars to clarify the tax treatment of share sales. These circulars specify in particular that:

- Capital gains on sales before 17 November 2014 are taxable.

- Capital gains on sales after 17 November 2014 are temporarily tax exempt.

- Since the PRC tax authority has not made a definitive pronouncement on how the tax would be calculated or collected, nor on the duration of the exemption, investors should note that:

- The Compartment's Net Asset Value may be adversely affected by a change in PRC tax rules;

- The adverse impact on the Compartment's performance resulting from a change in PRC tax rules will depend on the date on which the Compartment's equities are bought or sold; and

- The magnitude of this adverse impact on the Compartment's performance may not be proportional to the number of equities that an investor holds in the Compartment if tax obligations in the PRC are amended retroactively and, in certain circumstances, could amount to 100% of the Net Asset Value of a given equity class.

The investor is therefore urged to refer to the "Taxation in the PRC" section below for more detailed information.

Benchmark indicator:

The MSCI China A Net Total Return index (the "Benchmark Indicator") is listed in RMB onshore (CNY).

The Benchmark Indicator capitalisation-weighted index tracks the performance of the "A-Shares" market (equities in companies formed in the People's Republic of China, excluding Hong Kong (hereinafter "PRC")), that are listed on the Shanghai and Shenzhen exchanges and traded in Chinese yuan ("CNY"). The Benchmark Indicator is generally composed of medium and large-sized companies that represent 85% of the PRC universe of investable equities, in terms of free-float market capitalisation. On 31 October 2013, the index was composed of 464 equities.

The MSCI China A Net Total Return Index is a capitalisation-weighted index, which means that the weight of each constituent index is proportional to its free-float market capitalisation.

The Benchmark Indicator is a "Total Return" index, i.e. the dividends from the constituent Benchmark Indicators are reinvested.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the Internet site: http://www.msci.com/products/indices/country_and_regional/domestic_equity_indices/china/

Benchmark Indicator revision and composition

The Benchmark Indicator is revised every six months, according to the methodology described in the Benchmark Indicator's Rulebook, available on the MSCI website:

http://www.msci.com/products/indices/country_and_regional/domestic_equity_indices/china/.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator fixing price is provide daily by Reuters and Bloomberg.

In CNY:

Reuters code: .MICNA0000NCN Bloomberg code: M7CN1A

In USD:

Reuters code: .MDCNA0000GUS Bloomberg code: MBCN1A

The Benchmark Indicator's closing price is available at the Internet site: http://www.msci.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the highest possible correlation with the Benchmark Indicator's performance, the Compartment will use a direct replication method, which means that the Compartment will primarily invest in the equities comprising the Benchmark Indicator.

As part of the optimisation of the Benchmark Indicator's direct replication method, the Compartment, represented by its delegated asset manager, may decide to use a so-called "sampling" technique that involves investing in a selection of representative securities comprising the Benchmark Indicator, with the aim of limiting the costs related to the investment in the Benchmark Indicator's various components and/or to take into account the operational constraints of investing in the various Benchmark Indicator constituents. A sampling-based replication strategy could notably prompt the Compartment to invest in a representative selection of securities (but not all securities) comprising the Benchmark Indicator, in different proportions than is the case within the Benchmark Indicator, or even to invest in securities other than the Benchmark Indicator's components.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument ("FFI"). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure that investors can benefit from transparency with regard to the adopted direct replication method (complete replication of the Benchmark Indicator or sampling in order to limit the replication costs) and to the consequences in terms of assets held by the Compartment, information on the updated composition of the basket of balance sheet equities held in the Comportment's portfolio is available on the page dedicated to the Compartment, accessible on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

Investors are also informed of the fact of the Compartment's asset manager by delegation being in possession of a Renminbi Qualified Foreign Institutional Investor licence ("RQFII" or the "RQFII Licence") in the People's Republic of China ("PRC") and of obtaining a RQFII "quota" dedicated to the Compartment's investments (the "Quota"), will allow the aforesaid asset manager, acting in the name and on behalf of the Compartment, to implement the Investment strategy described above. More specifically, subject to the risks identified in the "Risk Profile section below, it is indicated that the aforesaid RQFII Licence and Quota will notably allow the delegated asset manager:

- To invest in the A-Shares in the Compartment's name and on its behalf, within the conditions and limits included in the said Quota and Licence, without a minimum holding period,

- To repatriate, into and out of the PRC, the sums related to the Compartment's purchase/sale operations of A-Shares on each business day in the PRC, while performing, if relevant, the exchange operations needed for the conversion of the sums denominated in RMB into the currency of the relevant unit class.

In order to implement the investment strategy described above, the Compartment asset manager by delegation may also invest in A-Shares via the "Shanghai Hong-Kong Stock Connect", the common trading platform set up on 17 November 2014 between the Hong-Kong and Shanghai stock exchanges (the "Shanghai Hong-Kong Stock Connect"). The Shanghai Hong-Kong Stock Connect notably enables investors outside of PRC to invest in A-shares traded on the Shanghai exchange, without necessarily having to have an RQFII License and Quota.

Additional information on the conditions and limits governing operations performed by the delegated asset manager relative to Chinese A-shares, within the framework of the corresponding RQFII Licence and Quota, can also be provided to investors who make a written request for such information to the Management Company.

Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets).

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the financial manager by delegation, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

2. Off-balance sheet assets (derivative instruments)

The Compartment will not have recourse to future financial instruments, except, subsidiarily, and within limits set by regulations, to futures contracts on indices or on bonds listed on regulated markets.

3. Securities with integrated derivatives

None.

4. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

5. Temporary securities acquisition and sale operations

None.

The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

6. Financial guarantees

None.

No financial guarantee will be granted / received by the Compartment within the framework of the implementation of its management objective.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Specific risks linked to investment in People's Republic of China:

Investors in the Compartment should be aware of the following risks inherent to investments in the People's Republic of China (PRC):

- RQFII risk

The Compartment's capacity to achieve its investment objective depends, amongst other things, on the RQFII quota allotted to it. If the Compartment's RQFII quota is too small, this could adversely affect the Compartment's operation. PRC regulations governing RQFII status may also be amended at any time by the China Securities Regulatory Commission (CSRC) and/or, with respect to foreign exchange, by the State Administration of Foreign Exchange ("SAFE") bureau, which could adversely affect the Compartment's capacity to achieve its investment objective and result in its dissolution. In particular, RQFII status means that any increase of the investment quota is subject to authorisation by the SAFE. If the Compartment wishes to increase its quota, it may take quite a long time to obtain approval from the SAFE. Any restriction involving the Compartment's granted quota may affect its investments. Such a restriction may therefore affect the trading of the Compartment's shares on an exchange, which could, in such circumstances and depending on the exchange's rules, trade above their Net Asset Value. Lastly, if the delegated asset manager loses its RQFII licence, if the RQFII quota is reduced, or if RQFII requirements are significantly increased, the Board of Directors may decide to dissolve the Compartment, subject to AMF approval.

- Shanghai Hong-Kong Stock Connect risks

The Compartment's capacity to achieve its investment objective depends among other things on whether or not A-shares can be traded via the Shanghai Hong- Kong Stock Connect. As of the date of this publication, the Shanghai Hong Kong Stock Connect imposes two quotas on the total net purchase orders that may be executed: a daily quota and an overall quota since 17 November 2014. If either of these quotas is exceeded, purchase orders on the Shanghai Hong-Kong Stock Connect will be automatically suspended (at least temporarily in the case of the daily quota), which could impair the Compartment capacity to achieve its investment objective.

- Economic, political and social risks

Any political change, social instability and/or unfavourable diplomatic, political, economic and/or social development that may occur in or in connection with the PRC (hereinafter a "Policy Change") could result in the imposition by the Chinese government of additional restrictions and limits, such as expropriation, confiscatory taxes or the nationalization of certain companies included in the Benchmark Indicator. Investors should also note that a Policy Change may have an adverse impact on PRC stock exchanges and on the Compartment's performance, and could ultimately result in the Compartment's dissolution by decision of the Board of Directors**.**

- Economic risks in PRC

The economy of the PRC has grown very rapidly. It is, however, not certain that this growth will continue and it may be irregular across the different sectors of the PRC economy. The PRC government has from time to time put in place various measures to prevent an excessively sharp acceleration of the business cycle, and the transition of the country's economy from a socialist economy to one that is more market-oriented has caused economic and social tensions that could stop this transition or compromise its success. Any of these risks could diminish the Compartment's performance.

- Capital repatriation risks

The system for repatriating capital is subject to the approval of the Chinese SAFE authorities and to the risk that the repatriation of capital may be restricted in terms of amount or frequency (as of the date of the Compartment's inception, however, RQFII regulations allow capital to be repatriated daily without requiring approval).

Furthermore, the regulations and standard economic practices in the PRC that govern the repatriation of funds from the domestic Chinese market to other markets and their conversion into a foreign currency could be modified in a way that adversely affects the Compartment.

The unfavourable regulatory developments and situations described above could suspend or restrict the conversion or transfer of foreign currencies and could possibly:

- Diminish the Compartment's capacity to fully achieve its investment management objective and/or;

- Diminish the Compartment's performance, and/or;

- Ultimately result in the Compartment's dissolution, by decision of the Board of Directors.

- PRC legal system risk

The legal system in the PRC is based on statutory law. However, some regulations have yet to be implemented and there is no assurance that they will actually ever be implemented in their entirety. In particular, PRC regulations on the control of exchange rates are relatively recent and their application is still quite uncertain. Moreover, these regulations give the Chinese authorities (and in particular CSRC and SAFE) broad discretion in their respective interpretation of the regulations, which leaves uncertainty as to how they might be applied and used. Any of these risks could diminish the Compartment's performance.

- State control of exchange rates and of future exchange rate movements

Under the current RQFII system, offshore RMB (CNH) can be converted into onshore RMB (CNY) and vice-versa on a one-for-one basis. The CNH also serves as a pivot currency between the share class currencies (USD and EUR) and CNY. There is no guarantee that, in the future, an exchange rate will not be applied to the conversion of CNH into CNY or vice-versa.

- Dependence on the A-shares market

The existence of a liquid market for A-shares depends on the supply of and demand for A-shares. It should be noted that the Shanghai and Shenzhen stock exchanges, on which the A-shares are listed, are undergoing huge changes and that their market capitalisations and trading volume are less than those of exchanges in developed countries. The volatility of A-share markets and any difficulty in trading A-shares or in settling A-share trades could result in significant fluctuations in the price of the securities traded in these markets, and ultimately in the Compartment's Net Asset Value.

- Taxation in the PRC

The government of the PRC has implemented several tax reforms in recent years, and it is possible that the current tax legislation and regulations could be revised or modified in the future.

Furthermore the PRC's tax authority (the "State Administration of Taxation") has confirmed the 10% withholding tax on dividends, premiums and interest paid to investors with RQFII status (subsequent to the "PRC Corporate Income Tax Law", which came into effect on 1 January 2008) or who invest via the Shanghai Hong-Kong Stock Connect (subsequent to Caishui circular [2014] No. 81).

This withholding tax may be reduced by virtue of a double taxation treaty with China, provided that certain conditions are met and subject to the approval of PRC tax authorities.

It should also be noted that any dividends paid to shareholders by the Compartment will be obtained from the receipt of corresponding amounts from the investment in the A-shares and that all amounts of this kind will be net of the withholding tax on dividends, premiums and interest applicable in the PRC.

Concerning the taxation of share sales, on 14 November 2014, the PRC Ministry of Finance and tax authority issued circulars, which among other things specified the tax treatment to be applied to capital gains from the sale or "A-Shares" purchased subject to an RQFII quota or via the Shanghai Hong-Kong Stock Connect, the following should in particular be noted:

- Capital gains on sales before 17 November 2014 are taxable,

- Capital gains on sales as of 17 November 2014 are temporarily tax exempt.

The PRC tax authority has not made a definitive pronouncement on how the tax would be calculated or collected, nor on the duration of the exemption.

Accordingly, we attract the attention of investors to the following:

- The Compartment's Net Asset Value may be adversely affected by a change in PRC tax rules;

- The adverse impact on the Compartment's performance resulting from a change in PRC tax rules will depend on the date on which the Compartment's equities are bought or sold; and

- The magnitude of this adverse impact on the Compartment's performance may not be proportional to the number of shares that an investor holds in the Compartment if tax obligations in the PRC are amended retroactively and, in certain circumstances, could amount to 100% of the Net Asset Value of a share class.

The asset manager by delegation has made 10% provision on Compartment's capital gains up to 14 November 2014. Furthermore, it should be noted that although the PRC tax authority has confirmed the temporary exemption of withholding tax on capital gains on share sales as of 17/11/2014, there is no way of knowing with certainty what investor obligations will be with respect to PRC's taxation of capital gains on share sales before 17/11/2014. Until further information is provided on the taxation and calculation of withholding tax on capital gains before 17 November 2014, there can be no assurance as to whether the aforementioned provision is sufficient or not, since it cannot currently be known with certainty what obligations may be imposed on investors with RQFII status in respect of the PRC's taxation of capital gains. If the provision made proves to be insufficient, this could adversely affect the Compartment's Net Asset Value.

However, and as is the case for any mutual fund that complies with Directive 2009/65/EC, the Compartment's shareholders can lose no more than the capital they invest and the expense of purchasing and selling shares.

Furthermore, since Chinese tax authorities have only confirmed a temporary exemption of the taxation of capital gains made as of 17 November, the asset manager by delegation may decide to make a provision if Chinese tax authorities specify the duration of the exemption or amend this temporary rule in part or in whole. In this event, such a provision would adversely affect all of the Compartment's net asset values calculated as of the date of the first provision. Such a provision would also reduce the Compartment's performance relative to that of the Benchmark Indicator.

In addition to the withholding tax on dividends, premiums, interest and capital gains referred to above, since 19 September 2008, the sellers of A-shares have been required to pay a stock market tax of 0.1 % of the share price. The PRC authorities may decide to modify this tax.

- Accounting and reporting standards:

The standards and practices for accounting, auditing and the reporting of financial information that apply to PRC companies may differ from those of countries with more developed financial markets. Such differences can adversely affect certain practices such as asset valuation methods and the reporting of information to investors.

- Order execution risk in the PRC

Under RQFII regulations, the delegated asset manager must select one or more intermediaries ("Brokers") in the PRC to execute stock market orders involving A-shares on the Shanghai Stock Exchange and the Shenzhen Stock Exchange. The delegated asset manager may select the same Broker for transactions on both of these exchanges. If a Broker defaults, the Compartment may have difficulty recovering its assets, which could adversely affect its valuation.

Société Générale and the delegated asset manager have procedures to identify and reduce such conflicts of interest and to resolve them equitably if necessary.

- Custody risk in the PRC

Under RQFII regulations, a sub-custodian in the PRC must be selected. The sub-custodian selected is Bank of China Limited, which in this capacity holds the Compartment's onshore RMB and securities accounts in the PRC. Under RQFII regulations, these accounts must be registered jointly in the names of the delegated asset manager (which has the RQFII license) and the Compartment. There is therefore a risk that the assets held in PRC may not be as well protected as if they were registered in the Compartment's name only.

When, pursuant to the investment strategy, the delegated asset manager purchases and/or sells A-shares via the Shanghai Honk-Kong Stock Connect, the sub-custody in relation to these transactions may be entrusted to a sub-custodian other than Bank of China Limited (the "Third Party Sub-custodian"). In this case, the Compartment's accounts with the Third-Party sub-custodian will be opened in the joint name of the Depositary and the Compartment.

- Risk that trading is suspended:

Trading in the Benchmark Indicator's constituents may be temporarily suspended, making it impossible for the Compartment to value these securities correctly and/or buy or sell them.

Other risks in investing in this Compartment:

Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

Risk related to low diversification of the Benchmark Indicator

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

Risks related to the absence of perfect replication

Replication of the Benchmark Indicator by means of an investment in all of the Benchmark Indicator's components could prove to be costly or operationally very difficult. Also, the Compartment's manager may employ optimisation techniques, notably the sampling technique that involves investing in a representative selection of securities (but not all securities) comprising the Benchmark Indicator, in different proportions than is the case within the Benchmark Indicator, or even investing in securities other than the components of the index or future financial instruments. The use of these optimisation techniques could result in a greater ex-post tracking error and notably lead to differing performances between the Compartment and the Benchmark Indicator.

Risk related to the exposure to Emerging markets

The Compartment's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

Liquidity risk (primary market)

Should the Compartment adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- Suspension or stoppage of the calculation of the Benchmark Indicator, and/or;

- Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or;

- The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or;

- A market maker's violation of the rules applicable to this marketplace, and/or;

- A failure of this marketplace's IT or electronic systems.

Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment, the Compartment's net asset value may be affected.

Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment bonds. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution;

ii) The Benchmark Indicator is definitively discontinued by the Benchmark Indicator;

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;

iv) The supplier of the Benchmark Indicator makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost;

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid;

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Exchange risk linked to the C-EUR (EUR/CNY) equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Exchange risk linked to the C-USD (USD/CNY) equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark index.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark index, as a result of exchange rate fluctuations.

Exchange risk linked to the C-RMB (CNH/CNY) equity classes

The RMB can be divided into two categories: RMB offshore (CNH) and RMB onshore (CNY). The above share classes are denominated in offshore RMB (CNH) and can be exposed to currency risk since they are not denominated in the same currency as the Benchmark Indicator. Changes in the exchange rate may therefore cause the net asset value of these share classes to decrease, even if the value of the Benchmark Indicator increases.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed upwards or downwards to performance of the large capitalisations on the "A shares" market, namely, securities issued by companies incorporated in People's Republic of China, excluding Hong Kong.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 7 May 2014.*
- *Compartment creation date: 28 August 2014.*

Activity report

The net asset value of the C-USD unit of the LYXOR FORTUNE SG UCITS ETF MSCI CHINA A (DR) Compartment shows an evolution of 36.14%* between the 31/10/2014 and 30/10/2015 and stands at USD 150.4726 on 30/10/2015, resulting in the fund's performance being equal to 50.47% since inception.

The fund replicates the performance of the MSCI China A NR Indx USD index, listed in US dollars (USD), representative of an investment strategy in Chinese Large and Mid-caps listed in Shanghai and Shenzhen.

This index has shown an evolution of 37.12% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI China A NR Indx USD index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the MSCI China A NR Indx USD index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 7 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

On 30/10/2015, the tracking error reached the level of 1.1240% for the Compartment. The level of the tracking error for the period was of 2.00%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The Board of directors nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;

- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The Board of directors nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The financial management delegatee independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the financial management delegatee's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Classes of equities and units of Collective Investment Undertakings operating under Italian law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Classes of equities and units of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the financial management delegatee's responsibility.

The exchange rates used for the assessment of financial instruments denominated in Renminbi (RMB) is the WM Reuters fixing rate at 9:00 a.m. GMT published by Thomson Reuters on the day the Compartment's net asset value is determined.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the Board of directors when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.85% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in USD.

Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)*	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) (1)	**-**	-	-	-	-
Unit capitalisation *	**-**	-	-	-	-

** The amounts of the distribution per unit, the unit capitalisation and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.*
(1) In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Equities of European Union Countries.

At least 60% of the LYXOR UCITS ETF FTSE DEVELOPED EUROPE EX-UK (DR) Compartment (the "Compartment") is continuously exposed in one or several markets of equities issued in one or several European Union countries including any eurozone markets.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

C-GBP Equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the "FTSE Developed Europe ex UK NTR Index" (Bloomberg code : AWNT05UK) (the "Benchmark Indicator") listed in pounds sterling and representative of equities of large-cap and mid-cap companies in the Developed European equity markets, excluding the United Kingdom.

The anticipated level of the ex-post tracking error under normal market conditions is 0.3%.

Benchmark indicator:

The Benchmark Indicator is representative of the performance of large-cap and mid-cap equities in the Developed European markets, excluding the United Kingdom.

The Benchmark Indicator is calculated by FTSE International limited.

The Benchmark Indicator is part of the FTSE Global Equity Index Series (GEIS) and is based on the GEIS methodology.

The Benchmark Indicator is weighted by free-float adjusted market capitalisation and its components are selected on the basis of various liquidity criteria, and in particular:

Each component must have at least 5% free float.

To be eligible for inclusion in the index, a component must possess sufficient liquidity. This criterion is assessed based on the median daily trading volume over one month must exceed a specified percentage of its shares in the market (i.e. after adjusting for free float) for at least ten months over a period of observation of twelve months.

Under the FTSE GEIS methodology, as of June 2014, the developed European countries were Austria, Belgium, France, Finland, Germany, Greece, Ireland, Italy, the Netherlands, Norway, Portugal, Spain, Sweden and Switzerland.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the FTSE Internet site: www.ftse.com.

Benchmark Indicator revision and composition

The composition of the Benchmark Indicator is revised every six months.

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

The exact composition and the revision rules of the Benchmark Indicator published by FTSE are available on the Internet site: www.ftse.com.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated daily at the official closing price of the exchanges where the index constituents are listed.

The Benchmark Indicator is also calculated in real time every stock exchange trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .TRIAWNT04UK Bloomberg code: AWNT05UK

The Benchmark Indicator's closing price is available on the FTSE Internet site: www.ftse.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ a direct replication method, which means that the Compartment will mainly invest in the equities that underlie the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, in particular, engage in transactions involving Future Financial Instrument ("FFI"). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To provide investors with transparency on the Benchmark Indicator replication method used (either full index replication or sampling to reduce replication costs) and on the consequences of this method on the Compartment's assets, investors may find up-to-date information on the composition of the basket of balance sheet assets in the Compartment's portfolio on the page dedicated to the Compartment at www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, European equities (from all economic sectors, listed on all markets).

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF mentioned in article R214-13 of the [French] Monetary and Financial Code. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment may, on an ancillary basis, engage in transactions involving FFIs traded on a regulated market or over-the-counter.

With respect to over-the-counter FFIs and in accordance with its best execution policy, the management company considers that Société Générale is the counterparty that would generally enable it to obtain the best possible result for any hedging transactions involving derivatives that the Compartment may engage in in accordance with its investment strategy. Accordingly, all of some of these derivatives may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, in particular the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as collateral for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment will be entitled to all income from such temporary disposals of securities, after the deduction of all direct and indirect operating expenses.

These operating expenses, which are incurred for the purpose of efficient portfolio management, may be borne by the Compartment's management company, by the Agent and/or by any other intermediary who provides services in connection with these transactions.

These direct and indirect operating expenses will be calculated as a percentage of the Compartment's gross revenue. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

Income from the lending of securities will be paid to the Compartment after deduction of the direct and indirect operating expenses borne by the Agent and possibly by the management company. Since these direct and indirect operating expenses do not increase the Compartment's operating expenses they have been excluded from ongoing charges.

If necessary, the Compartment's annual report will provide the following information:

- The exposure resulting from the use of efficient portfolio management techniques/transactions

- The identity of the counterparty(ies) involved in these transactions

- The nature and amount of any collateral received to reduce the Compartment's counterparty risk, and

- The income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the Compartment lends or otherwise temporarily disposes of securities it must receive collateral in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any collateral the Compartment receives for this purpose must meet the applicable statutory and regulatory criteria, particular with respect to liquidity, valuation, issuer creditworthiness, correlation, and collateral management and enforcement risks. All collateral received must in particular meet the following criteria:

(a) All non-cash collateral must be of high quality, be highly liquid and be traded on a regulated exchange or a multilateral trading facility with transparent pricing to enable rapid sale at a price near the valuation price.

(b) This collateral must be valued at least daily and assets with highly volatile prices are not acceptable as collateral, unless a sufficiently prudent discount or "haircut" is applied.

(c) The issuer of this collateral must be independent of the counterparty and must not be closely correlated with the counterparty's financial performance.

(d) This collateral must be sufficiently diversified by country, market and issuer, and no exposure to a single issuer may exceed 20 % of the Compartment's net asset value.

(e) The Compartment's management company must be able to enforce this collateral in full and at any time, without having to consult with the counterparty or obtain its approval.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets.

Subject to the above conditions, the Compartment may take collateral in the following forms:

(i) Cash and assets of equivalent liquidity, such as short-term bank balances and money-market instruments.

(ii) Bonds issued or guaranteed by an OECD member state, or by its local government entities, or by an EU, regional or global supranational institution or organisation, or by any country provided that conditions (a) to (e) above are fully complied with.

(iii) Equities or units issued by money-market funds that calculate a daily net asset value and have an AAA or equivalent credit rating.

(iv) The shares or units of CIU that invest mainly in the bonds and/or equities indicated in (v) and (vi) below

(v) Bonds issued or guaranteed by first-class issuers offering sufficient liquidity

(vi) Equities admitted for trading or traded on a regulated exchange of an EU member country, on a stock exchange of an OECD member country or on a stock exchange of another country provided that conditions (a) to (e) above are fully complied with and that these equities are components of a major index.

Collateral discount policy

The Compartment's management company shall apply a discount to the collateral it receives for temporary securities transactions. The amount of these discounts will depend mainly on the following:

- The nature of the collateral asset
- The collateral's maturity (if applicable)
- The credit rating of the collateral issuer (if applicable)

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of collateral:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

(a) Deposited in an authorised institution

(b) Invested in high-quality government bonds

(c) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the Compartment is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

(d) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

Bearers' money will be invested mainly in the financial instruments selected by the management company. The prices of these financial instruments will rise and fall in accordance with market fluctuations and contingencies.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Benchmark Indicator tracking risk

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and in derivatives. The use of such optimisation techniques may increase the ex post tracking error and cause the Compartment to perform differently from the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities comprising the Benchmark Indicator could be listed in a currency other than that of the index, or be derivatives of securities listed in a currency other than that of the index. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use FFI on an ancillary basis.

In this case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's Management Company and the counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the collateral received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as collateral and/or (iv) the illiquidity of the market in which the collateral received is listed. If cash collateral is reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of collateral the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk of investing in mid-cap companies

The Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises, which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply than that of a similar investment in large-capitalisation equities.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

The Compartment uses FFI negotiated over-the-counter, or FFIs traded on a regulated market, that can notably take the form of swap contracts. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to listed large-capitalisation and mid-capitalisation companies in the Developed European equity markets, excluding the United Kingdom.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 22 July 2014.*
- *Compartment creation date: 8 August 2014.*

Activity report

The net asset value of the C-GBP unit of the LYXOR UCITS ETF DEVELOPED EUROPE EX-UK (DR) shows an evolution of 4.94%* between the 31/10/2014 and 30/10/2015 and stands at GBP 5.3791 on 30/10/2015, meaning a fund performance of 7.58% since inception.

The fund replicates the performance of the FTSE AWNT05UK INDEX, listed in pounds sterling (GBP),is a float-adjusted capitalization-weighted index measuring the evolution in the performance of large and mid-cap equities covering the European Developed markets, excluding the United Kingdom.

This index has shown an evolution of 4.94% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the FTSE AWNT05UK INDEX, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the FTSE AWNT05UK INDEX, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

On 30/10/2015, the tracking error reached the level of 0.0050% for the Compartment. The level of the tracking error for the period was of 0.3%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Operating and management fees including tax(1)	Net assets	maximum 0.20% per year
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency in which the accounting is maintained.

By main currency	EUR	CHF	SEK	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	1 416 894,76	489 248,24	122 837,65	119 269,05
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	240,49	222,46	2,71	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	146,93	-	-	-
Financial accounts	88,75	222,47	2,71	0,07
Off-balance sheet	-	-	-	-
Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	**465,66**
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Coupons receivable	465,66
-	-
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**497,55**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Accrued expenses	350,62
Deferred settlement purchases	146,93
-	-
-	-
-	-
Other operations	-

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	-	-	-	-
Subscription / redemption commission		-		-
Remittances		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**0,20**
Performance commissions (variable fees): amount of costs for the fiscal year	**-**
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	**-**
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**
3.8.2 Description of the other commitments received and/or given ..... **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	**-**
- Other temporary operations	**-**
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	**-**
- bonds	**-**
- debt securities	**-**
- other financial instruments	**-**
Financial estimates given as guarantees and maintained in their original item:	
- equities	**-**
- bonds	**-**
- debt securities	**-**
- other financial instruments	**-**
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
- CIU securities	**-**
- Swaps	**-17,064,28**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits
-	-	-	-	-
-	-	-	-	-
-	-	-	-	-
-	-	-	-	-
Total advances	**-**	**-**	**-**	**-**

	30.10.2015	**31.10.2014**
Allocation of the earnings	GBP	GBP
Sums still to be allocated		
Carried forward	-	-
Earnings	43 139,96	1 691,80
Total	**43 139,96**	**1 691,80**
Allocation		
Distribution	-	-
Carried forward for the fiscal year	-	-
Capitalisation	43 139,96	1 691,80
Total	**43 139,96**	**1 691,80**
Information relative to the equities and resulting in a distribution right		
Number of equities	-	-
Distribution per unit	-	-
Tax credits linked to the allocation of the profit and loss	**-**	**-**

3.11. Allocation table of the amounts available for distribution related to the net capital gains and losses
(in the Compartment's currency of account)

Advances on net capital gains and losses paid for the fiscal year

Date	Overall amount	Unit amount
-	-	-
-	-	-
-	-	-
-	-	-
Total advances	**-**	**-**

	30.10.2015	**31.10.2014**
Allocation of the net capital gains and losses	GBP	GBP
Sums still to be appropriated		
Non-distributed prior net capital gains and losses	-	-
Net capital gains and losses of the fiscal year	-4 756,71	-5 482,47
Advances paid on net capital gains and losses of the fiscal year	-	-
Total	**-4 756,71**	**-5 482,47**
Allocation		
Distribution	-	-
Non-distributed net capital gains and losses	-	-
Capitalisation	-4 756,71	-5 482,47
Total	**-4 756,71**	**-5 482,47**
Information relative to the equities and resulting in a distribution right		
Number of equities	-	-
Distribution per unit	-	-

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

Currency GBP	**30.10.2015**	31.10.2014	-	-	-
Net assets	**2 151 651,82**	2 050 453,16	-	-	-
Number of outstanding equities	**400 000**	400 000	-	-	-
Net asset value	**5,3791**	5,1261	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**0,09**	0,00	-	-	-

[(1)] *In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.*

[(2)] *The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.*

Compartment creation date: 8 August 2014.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the Finvex Sustainability Low Volatility Europe index (Bloomberg Code: RSEUPER), listed in EUR, which is representative of a dynamic allocation of 50 to 60 securities listed on various European markets. Each component of this index is selected monthly from a universe of companies judged to be "sustainable" and "socially responsible" from among the components of the Dow Jones Sustainability Europe Index (the "Parent Index").

The anticipated level of the ex-post tracking error under normal market conditions is 0.15%.

Benchmark indicator:

The benchmark indicator is the Finvex Sustainability Low Volatility Europe index (the "Benchmark Indicator").

The Benchmark Indicator provides exposure to a dynamic allocation of 50 to 60 securities listed on various European exchanges. Each component of this index is selected monthly from an investment universe judged to be "sustainable" and "socially responsible" from among the components of the Parent Index.

The Benchmark Indicator is denominated in EUR.

The Benchmark Indicator was developed independently by Finvex Group, which sponsors the index under an agreement with Coöperatieve Centrale Raiffeisen-Boerenleenbank B.A.

The Benchmark Indicator is calculated by S&P-DJ.

The Benchmark Indicator uses a portfolio optimisation method that aims to minimise, subject to constraints, the index's variance by determining the anticipated volatility on the basis of each security's compound returns and their anticipated correlations over a medium-term time horizon. This optimisation is applied to a "sustainable" and "socially responsible" investment universe which must first meet specific liquidity criteria. This method also serves to comply with certain sector-weighting constraints relative to the Parent Index and to keep the risk contribution determined for each component below a maximum percentage relative to the Benchmark Indicator's aggregate risk.

The companies included in the Benchmark Indicator are selected on the basis of long-term economic, environmental and social criteria.

The Dow Jones Sustainability Europe index (the Parent Index) is maintained in collaboration with S&P Dow Jones and RobecoSAM. This index is composed of European companies that are judged to be leaders in terms of sustainable development, as indentified by RobecoSAM on the basis of a systematic assessment of their social and environmental responsibility.

The "Dow Jones Sustainability Europe" index measures the performance of equities that are considered to be representative of the European sustainable equities market. The issuers of these equities are selected on the basis of long-term economic, environmental and social criteria and form the largest 20% of the 600 largest sustainable European companies in the Dow Jones Global Total Stock Market index.

The Parent Index components are selected on the basis of a systematic assessment of corporate social and environmental responsibility criteria.

The selection method employed by S&P Dow Jones in collaboration with RobecoSAM assesses CSR performance using a variety of criteria that include efforts to reduce climate change and energy consumption, human resources development and valorisation, knowledge and expertise management, relationships with suppliers and stakeholders, and also a good corporate governance.

Since the Benchmark Indicator is calculated with net dividends reinvested, the dividends paid by each index component are reinvested in the Benchmark Indicator after the deduction of any applicable withholding tax.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.finvex.com/eng/indices_00.php

A description of the Parent Index is available on the Internet at: http://www.djindexes.com/sustainability/

Benchmark indicator revision and composition

The selection of each Benchmark Indicator component is renewed monthly.

The exact composition of the Benchmark Indicator published by S&P DJ is available on the Internet at: www.finvex.com/eng/indices_00.php

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark indicator publication

The Benchmark Indicator is calculated daily at the official closing price of the exchanges where the index constituents are listed.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg. Reuters code: N/A

Bloomberg code: RSEUPER

The Benchmark Indicator's closing price is available on the Internet site: www.finvex.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will be exposed to the Benchmark Indicator through an indirect replication method which means that the Compartment will have recourse to the purchase of a basket of balance sheet assets (as defined below), and:

the conclusion of a forward swap contract traded over-the-counter that will allow the Compartment to achieve its management objective, if relevant, by transforming the exposure to its balance sheet assets into an exposure to the Benchmark Indicator.

If relevant, the Compartment will invest mainly in equities, debt securities and money market instruments.

The basket of assets held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment may be exposed to the equities of a single issuing entity, for up to 20% of its assets. This 20% limit will be verified at each rebalancing date of the Benchmark Indicator, in compliance with method of calculation of the Benchmark Indicator, that limits to 20% the exposure of each equity of a single issuing entity and whose calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator.

This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator. In particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios provided for by the regulation, international equities (from all economic sectors, listed on all markets) and also in debt securities and money-market instruments.

Investment in the following is limited to 10% of net assets:

- Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC,

- French or European AIF approved by the AMF and meeting the criteria of Article R214-13 of the [French] Financial and Monetary Code.

As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment may also enter into transactions involving Future Financial Instrument ("FFI") within regulatory limits, and in particular OTC index-linked swaps that swap the value of the Compartment's securities (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps, as specified below.

These future financial instruments (including index-linked swaps) can therefore be negotiated with Société Générale, without prior open competition involving several counterparties. As a result, the Management Company will not commit to a formal, traceable and verifiable procedure for open competition between the counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

The Compartment can have recourse, up to 20% of its net assets, to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Exchange risk linked to the Benchmark Indicator

The Compartment is exposed to an exchange risk to the extent that the underlying securities comprising the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Subscribers concerned and typical investor profile: The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the European equity market.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 11 July 2014.*
- *Compartment creation date: 11 August 2014.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF FINVEX SUSTAINABILITY LOW VOLATILITY EUROPE Compartment shows an evolution of 18.77%* between the 31/10/2014 and 30/10/2015 and stands at EUR 122.4739 on 30/10/2015, meaning a fund performance of 22.47% since inception.

The fund replicates the performance of the Finvex SusPortEurET index, listed in euros (EUR), provides exposure to a dynamic allocation of 50 to 60 securities listed on various European exchanges. Each component of this index is selected monthly from an investment universe judged to be "sustainable" and "socially responsible" from among the components of the Parent Index.

This index has shown an evolution of 19.43% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the Finvex SusPortEurET index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Finvex SusPortEurET index.

The equities held as assets by the Compartment will notably be equities that make up the Finvex SusPortEurET index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

On 30/10/2015, the tracking error reached the level of 0.0310% for the Compartment. The level of the tracking error for the period was of 0.15%.

The discrepancy between the target tracking error and the actual tracking error was not significant which shows a compliance with the TE objective set at the beginning of the fiscal year.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU or AIF operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU or AIF operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.60% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros (EUR).

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Capitalisation of all the amounts available for distribution.

appendix

The Finvex Sustainable Portfolio Europe index (the "Benchmark Indicator") is registered by the Finvex group. This index or its name may not be used without the Finvex group's consent. The Benchmark Indicator composition and methodology, which must comply with the rights and rules of S&P Opco LLC and its subsidiaries in respect of the DJSI Europe index, are the exclusive intellectual property of the Finvex group.
The Benchmark Indicator and the Dow Jones Sustainability Europe index are calculated by S&P Opco LLC, a subsidiary of S&P Dow Jones Indices LLC.
Dow Jones is a trademark of Dow Jones Trademark Holdings LLC ("Dow Jones"). The products based on these indices are in no way sponsored, approved, sold or promoted by S&P Opco LLC, Dow Jones or their subsidiaries, and S&P Opco LLC, Dow Jones and their subsidiaries express no opinion as to the merits of investing in such a product.
The Benchmark Indicator was developed independently by the Finvex group, with the approval of Coöperatieve Centrale Raiffeisen-Boerenleenbank B.A (acting as Rabobank International), the London branch of Rabobank International.
The Benchmark Indicator is the successor of the Rabo Sustainable and Efficient Portfolio Europe index (the "Rabobank Index") which exists since 1 July 2011. The Benchmark Indicator, or any product based on the Benchmark Indicator, is in no way sponsored, approved, sold or promoted by Rabobank International or its subsidiaries, which under no circumstance represent the Benchmark Indicator nor the merits of investing in any product based on the Finvex index.
The Benchmark Indicator's performance history is calculated using the Rabobank index and is used with Rabobank International's permission. The Finvex group confirms that the performance history of the Rabobank index was correctly extracted and accurately reproduced from publically available information sources.
Past performance is not a guide to future performance and potential investors should not rely on the historic performance of the Rabobank Index as assurance of future Finvex index returns. Rabobank International shall not be liable (even in the event of negligence) to any counterparty for an error in the Rabobank Index and shall have no responsibility to inform anyone of such an error.
Although the Finvex index is the successor of the Rabobank Index, it cannot be assured that the Benchmark Indicator and the Rabobank Index will not be managed simultaneously or coexist over a given period.
There can also be no assurance that any or all of the Rabobank Index investment methodologies that the index replicates (including the composition of the Rabobank Index, the formulas used and the calculation methods) will not be modified at some time in the future.

Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type
Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	**643 629,87**
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Deferred settlement sales	432 345,76
Account receivable	211 284,11
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**670 879,14**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Account payable	432 345,77
Deferred settlement purchases	211 284,11
Accrued expenses	27 249,26
-	-
-	-
Other operations	-

3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	110 000	13 081 437,50	146 000	17 466 638,80
Subscription / redemption commission		-		-
Remittances		-		-
Commissions acquired by the Compartment		-		-

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**0,60**
Performance commissions (variable fees): amount of costs for the fiscal year	**-**
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	**-**
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**
3.8.2 Description of the other commitments received and/or given ..... **None**

3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	**-**
- Other temporary operations	**-**
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	**-**
- bonds	**-**
- debt securities	**-**
- other financial instruments	**-**
Financial estimates given as guarantees and maintained in their original item:	
- equities	**-**
- bonds	**-**
- debt securities	**-**
- other financial instruments	**-**
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
- CIU securities	**-**
- Swaps	**65 747,65**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

Advances paid during the fiscal year

Date	Overall amount	Unit amount	Total tax credits	Unit tax credits

Information relative to the equities and resulting in a distribution right		
Number of equities	-	-
Distribution per unit	-	-

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years

currency EUR	**30.10.2015**	31.10.2014	-	-	-
Net assets	**57 440 264,43**	52 077 002,09	-	-	-
Number of outstanding equities	**469 000**	505 000	-	-	-
Net asset value	**122,4739**	103,1227	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**417,36**	-0,96	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 11 August 2014.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the LYXOR JPX-NIKKEI 400 UCITS ETF (DR) Compartment ("the Compartment) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-EUR, Daily Hedged C-EUR, Daily Hedged C-USD, Daily Hedged C-GBP, Daily Hedged C-CHF: Capitalisation of all the amounts available for distribution.

Equities D-EUR, Daily Hedged D-EUR, Daily Hedged D-USD and Daily Hedged D-GBP: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate the upward or downward evolution of the "JPX-Nikkei 400 Net Total Return" index (Bloomberg code: JPNKNTR) (see the "Benchmark Indicator" section hereafter) listed in JPY, which is representative of the performance of the equities of 400 companies listed on the Tokyo Stock Exchange whose efficient use of capital and management in accordance with investors' interests makes them most attractive to investors.

The anticipated level of the ex-post tracking error under normal market conditions is 0.25%.

Benchmark indicator:

The Benchmark indicator is the JPX-Nikkei Index 400 index, listed in JPY (the "Benchmark Indicator").

The Benchmark Indicator represents the performance of the equities of 400 companies listed on the Tokyo Stock Exchange whose efficient use of capital and management in accordance with investors' interests makes them most attractive to investors.

Each Benchmark Indicator component is weighted by its float-adjusted market capitalisation, with a maximum weight of 1.5% for each component.

The equities eligible for the Benchmark Indicator are the companies listed on the Tokyo stock exchange (1 st Section, 2nd section, Mothers and JASDAQ) that meet the following criteria:

- They have been in business for at least three years and their liabilities do not exceed their assets

- They are among the 1,000 most liquid stocks over the past three years and the largest by market capitalisation.

The equities are selected on the basis of quantitative and qualitative rating criteria.

- The quantitative rating criterion is the weighted aggregate of three indicators: i) the average ROE over the past three years (40% weight), ii) the total operating income over the past three years (40%) and iii) market capitalisation (20%).

- The qualitative rating criterion is determined using three measures: i) The number of outside members on the board of directors, ii) the adoption of IFRS accounting standards and iii) the publication of information on the company's revenue and earnings in English.

The Benchmark Indicator is rebalanced monthly.

The Benchmark Indicator is a Net Dividends Reinvested Index, which means that the net amount of the dividends from the Benchmark Indicator underlying shares are reinvested in the Benchmark Indicator.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.tse.or.jp.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised monthly.

The exact composition and the revision rules of the Benchmark Indicator are published by Tokyo stock exchange and available on the Internet site: www.tse.or.jp.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: JPXNK400NTR Bloomberg code: JPNKNTR

The Benchmark Indicator's closing price is available on the Internet site: www.tse.or.jp.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its financial manager by delegation, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument ("FFI"). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of balance sheet assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's internet site at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned internet site.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets) including the small capitalisation markets.

The Compartment will be mainly invested in securities making up the Benchmark Indicator.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses. If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use FFI on an ancillary basis. In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty. When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's Management Company and the counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed. If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk of investing in small and mid-cap companies

Le Compartment is exposed to small and medium capitalisation companies and more specifically to the equity securities of small and medium companies and intermediate sized companies (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks.

The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution;

ii) The Benchmark Indicator is definitively discontinued by its supplier;

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;

iv) The supplier of the Benchmark Indicator makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost;

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid;

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the C-EUR and D-EUR equity classes (EUR/JPY)

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

- Exchange risk linked to the Daily Hedged C-EUR and Daily Hedged D-EUR equity classes

In order to cover the EUR/JPY currency exposure on the Daily Hedged C-EUR and Daily Hedged D-EUR equity classes, the Compartment uses a hedging strategy enabling it to reduce the impact of variations between the currency of the Benchmark Indicator and the currency of the equity class. The daily implementation of this coverage and its imperfection means that Daily Hedged C-EUR and Daily Hedged D-EUR equity classes may be subject to costs or downward market movements which may impact upon their net asset value.

- Exchange risk linked to the Daily Hedged C-USD and Daily Hedged D-USD equity classes

In order to cover the USD/JPY currency exposure on the Daily Hedged C-USD and Daily Hedged D-USD equity classes, the Compartment uses a hedging strategy enabling it to reduce the impact of variations between the currency of the Benchmark Indicator and the currency of the equity class. The daily implementation of this coverage and its imperfection means that Daily Hedged C-USD and Daily Hedge D-USD equity classes may be subject to costs or downward market movements which may impact upon their net asset value.

- Exchange risk linked to the Daily Hedged C-GBP and Daily Hedged D-GBP equity classes

In order to cover the GBP/JPY currency exposure on the Daily Hedged C-GBP and Daily Hedged D-GBP equity classes, the Compartment uses a hedging strategy enabling it to reduce the impact of variations between the currency of the Benchmark Indicator and the currency of the equity class. The daily implementation of this coverage and its imperfection means that Daily Hedged C-GBP and Daily Hedge D-GBP equity classes may be subject to costs or downward market movements which may impact upon their net asset value.

- Exchange risk linked to the Daily Hedged C-CHF equity classes

In order to cover the CHF/JPY currency exposure on the Daily Hedged C-CHF equity classes, the Compartment uses a hedging strategy enabling it to reduce the impact of variations between the currency of the Benchmark Indicator and the currency of the equity class. The daily implementation of this coverage and its imperfection means that Daily Hedged C-CHF equity classes may be subject to costs or downward market movements which may impact upon their net asset value.

- Risk related to the use of derivative instruments

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed to companies listed on the Tokyo Stock Exchange.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 5 September 2014.*
- *Compartment creation date: 15 September 2014.*

Activity report

The net asset value of the unit C-EUR of the LYXOR JPX-NIKKEI 400 UCITS ETF (DR) Compartment shows an evolution of 22.72%* over the fiscal year and stands at EUR 124.7841 on 30/10/2015, resulting in the fund's performance being equal to 24.78% since inception.

The net asset value of the unit Daily Hedged C-CHF of the LYXOR JPX-NIKKEI 400 UCITS ETF (DR) Compartment shows an evolution of -7.27%* between the 21/07/2015 and 30/10/2015 and stands at CHF 92.7319 on 30/10/2015, resulting in the fund's performance being equal to -7.27% since inception.

The net asset value of the unit Daily Hedged C-EUR of the LYXOR JPX-NIKKEI 400 UCITS ETF (DR) Compartment shows an evolution of 13.29%* between the 09/01/2015 and 30/10/2015 and stands at EUR 113.2891 on 30/10/2015, resulting in the fund's performance being equal to 13.29% since inception.

The net asset value of the unit Daily Hedged C-GBP of the LYXOR JPX-NIKKEI 400 UCITS ETF (DR) Compartment shows an evolution of 9.81%* between the 30/01/2015 and 30/10/2015 and stands at GBP 109.8077 on 30/10/2015, resulting in the fund's performance being equal to 9.81% since inception.

The net asset value of the unit Daily Hedged C-USD of the LYXOR JPX-NIKKEI 400 UCITS ETF (DR) Compartment shows an evolution of 9.71%* between the 30/01/2015 and 30/10/2015 and stands at USD 109.7059 on 30/10/2015, resulting in the fund's performance being equal to 9.71% since inception.

The fund replicates the performance of the JPX Nikkei NTR Index, listed in Japanese Yen (JPY), representing the 400 equities listed on the Tokyo Stock Exchange, the most efficient in terms of utilization of capital and operational profitability, whose management objectives aim at value creation for the shareholders.

This index has shown an evolution of 16.87% over the fiscal year. As the C-EUR, Daily Hedged C-CHF, Daily Hedged C-EUR, Daily Hedged C-GBP, Daily Hedged C-USD classes, are not valued in the index currency, the evolution of their net asset value is subject to an exchange risk. Over the fiscal year, the EUR decreased by 5.09% compared to the JPY, the CHF decreased by 5.40% compared to the JPY, the GBP increased by 5.63% compared to the JPY, the USD increased by 2.73% compared to the JPY

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,
- The costs for accessing the local markets of the securities of the replicated indexing,
- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the JPX Nikkei NTR Index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the JPX Nikkei NTR Index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

The level of the tracking error for the period was of 0.08%.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.25% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in Yen (JPY).

Indication of accountancy changes declared to each of the bearers individually

APPENDIX TO THE REPORT
intended for Swiss subscribers

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment
France.

Representative of the Swiss Compartment
Société Générale, Paris, Zürich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Compartment during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zürich Branch, Talacker 50, P.O. Box 1928, 8021 Zürich.

Calculation of the Total Expense Ratio

Annual closing of the compartment: 30 Oct.

Average fortune of the fund for the period from 01/11/14 to 30/10/15 : 17 769 912 738.00

UCITS management commission:

DAILY HEDGED C-CHF unit	0.25	% tax included

Compartments / feeder	LYXOR UCITS ETF IBOXX GERMANY 1-3Y (DR) is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt securities listed in euros.

The LYXOR UCITS ETF Iboxx Germany 1-3Y (DR) Compartment (the "Compartment") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Class of C-EUR equities: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the Markit Iboxx EUR Germany 1-3 Mid Price TCA index (the "Benchmark Indicator"), listed in EUR and representative of the performance of German government bonds having a residual maturity of 1 to 3 years.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Markit Iboxx EUR Germany 1-3 Mid Price TCA Benchmark Indicator is listed in euros.

The Benchmark Indicator is weighted by volume and provides exposure to German government bonds having a residual maturity of 1 to 3 years.

The Benchmark Indicator is calculated by Markit iBoxx Limited.

The Benchmark Indicator is composed of German government bonds having a residual maturity of 1 to 3 years. The weight of each index component depends on the corresponding bond's market value. The eligibility of each bond is based on the following criteria:

To be included in the Benchmark Indicator a bond must:

- be fixed rate
- have been issued by the German government
- have a minimum issuance size of two billion euros.

The settlement date for Markit indices is T+0 days. The index is calculated using the average price (or "mid price") between the bid and ask prices. New bonds are included in the Benchmark Indicator at their mid price.

Benchmark Indicator revision and composition

The Benchmark Indicator's composition is revised monthly.

The complete Benchmark Indicator methodology is available on: www.markit.com/indices.

Benchmark Indicator publication

The Benchmark Indicator price is fixed daily and available through Reuters and Bloomberg.

Reuters code: .IBXXABXD Bloomberg code: IBXXABXD

The Benchmark Indicator's closing price is available on the Internet site: www.markit.com/indices

Benchmark Indicator revision and composition

The Benchmark Indicator is revised monthly.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the Markit iBoxx Limited Internet site: www.markit.com/indices

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities guaranteed or issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the Compartment is managed:	Between 1 and 3
Currencies in which securities held by the Compartment are listed:	Euro: 100% of net assets Others: 0% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone: 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international bond securities.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the financial manager by delegation, or a company with which it is linked.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the Compartment uses temporary sales of securities, it must receive guarantees in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) any received non-cash guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including liquidity, short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment in the event of temporary securities transactions. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

(a) Deposited in an authorised institution

(b) Invested in high-quality government bonds

(c) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the CIU is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

(d) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

- Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

- The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

- A market maker's violation of the rules applicable to this marketplace, and/or

- A failure of this marketplace's IT or electronic systems.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Counterparty risk

The Compartment may use Future Financial Instrument (FFI) on an ancillary basis.

In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's management company and the counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed.

If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the German government bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is 3 years.

Information: This fiscal year has an exceptional term of 11 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 29 October 2014.*
- *Compartment creation date: 19 November 2014.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF IBOXX GERMANY 1-3Y (DR) Compartment shows an evolution of 0.38%* between 19/11/2014 and 30/10/2015 and stands at EUR 100.382 on 30/10/2015, meaning a fund performance of 0.38% since inception.

The fund replicates the performance of the Markit iBoxx EUR Germany 1-3 M index, listed in euros (EUR), is weighted by volume and provides exposure to German government bonds having a residual maturity of 1 to 3 years.

This index has shown an evolution of 0.33% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the Markit iBoxx EUR Germany 1-3 M index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Markit iBoxx EUR Germany 1-3 M index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 2 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

There is no Tracking Error because the fund was launched less than a year ago. The level of the tracking error for the period was of 0.08%.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

appendix

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Information: This fiscal year has an exceptional term of 11 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

appendix

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year

Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None
Cost of temporary purchases and disposals of securities	The amount of the transaction	Maximum 35% of the income obtained from these transactions

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

appendix

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Class of C-EUR equities: Capitalisation of all the amounts available for distribution.

The iBoxx € Germany 1-3 TRI index ("the Index") referred to here is the property of Markit Indices Limited (the "Index Sponsor") and is used under license for the Lyxor UCITS ETF iBoxx Germany 1-3Y Compartment. Lyxor International Asset Management recognizes and accepts that the Compartment is not sponsored, approved nor promoted by the Index Sponsor. The Index Sponsor makes no explicit or implicit commitment of any type and expressly refuses any guarantee in relation to the Index (with respect, for example, to its commercial value or suitability for a specific purpose) or to any data in the Index or in connection therewith, and in particular refuses any guarantee with respect to the quality, accuracy and/or completeness of the Index or of its related data, to the results that may be obtained from using the Index, to the Index's composition at any given date or time and/or to the credit-worthiness of any issuing entity, or to any credit or similar event (however so defined) pertaining to a bond that is a constituent of the Index at any given date or time.
The Index Sponsor shall not be liable to anyone whomsoever for an error in the Index (even in the event of negligence or for any other reason) and shall not be required to inform anyone in the event of such an error.
The Index Sponsor provides no recommendation, or expressed or implied, to buy or sell shales in the Compartment, and expresses no opinion on whether the Index is capable of replicating the performance of the relevant markets, or on the Index itself or on any transaction or product in relation thereto, or on any risks associated therewith. The Index Sponsor shall under no circumstance be required to take into consideration the needs of any third party when determining or modifying the composition of the Index or calculating the Index. No third party, nor the Index Sponsor, shall be liable to any other third party for any act or commission on the part or the Index Sponsor in relation to the determination, modification, calculation or maintenance of the Index.

Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation [(2)]	**-21,67**	-	-	-	-

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 November 2014.

Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt securities listed in euros.

The LYXOR UCITS ETF BARCLAYS FLOATING RATE EURO 0-7Y Compartment (the "Compartment") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

D-EUR equities classes: The Board of directors reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the "Barclays Euro Corporate FRN 0-7Y Enhanced Duration index" (the "Benchmark Indicator"), listed in euros and representative of the performance of corporate floating-rate bonds nominated in euros and having a residual maturity of less than 7 years.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator is listed in euros.

The Benchmark Indicator is calculated by Barclays Capital.

The Benchmark Indicator provides exposure to floating-rate corporate bonds denominated in euros and having a residual maturity of 1 month to 7 years. The weight of each index component is proportional to the market value of bonds in circulation, and is then adjusted such that 50% of the index will be invested in eligible securities with a residual maturity of no more than 3 years and the remaining 50% in eligible bonds with a residual maturity of 3 to 7 years inclusive.

To be eligible for the Benchmark Indicator, a bond must meet the following criteria:

- Have a median credit rating of at least BBa3/BBB-/BBB- ("investment grade"), among the Moody's, S&P and Fitch ratings;

- Have a residual maturity of at least 1 month and less than 7 years;

- Have a nominal value in circulation of at least 750 million euros;

- Have been issued less than 2 years ago;
- Be one of the following four types:
- floating-rate and linked to 3-month Euribor;
- step-up notes and bonds;
- callable;
- bullet. Perpetual bonds are not eligible.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the Internet site: www.barcap.com/indices

The performance tracked is that of the Benchmark Indicator's closing price at 5 p.m. (CET).

Benchmark Indicator publication

The Benchmark Indicator price is fixed daily and available through Bloomberg.

Bloomberg code: BFRD

The Benchmark Indicator's closing price is available on the Internet site: www.barcap.com/indices

Benchmark Indicator composition and revision

The Benchmark Indicator is revised monthly.

The frequency of this rebalancing will have an impact on the Compartment's costs and could therefore diminish its performance.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the Barclays Capital's internet site: www.barcap.com/indices

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment will notably be bonds issued by eurozone governments having the highest credit quality.

The bonds basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

For more information on the abovementioned eligibility and diversification criteria investors can visit the following Internet site: www.lyxoretf.com.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by a non-sovereign issuing entity. This 20% limit will be checked at each rebalancing date of the Benchmark Indicator, in compliance with the calculation method of the Benchmark Indicator that limits the exposure of each of components by 20% and whose calculation is ensured by the sponsor or the calculation agent of the benchmark Indicator. This 20% limit may be increased to 35% for a single non-sovereign issuing entity when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant, in case of high volatility of a debt issue, and/or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing entity debt and/or that could affect the credit rating of said issuer, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Interest rate sensitivity range within which the Compartment is managed:	Between 1 and 7

Currencies in which securities held by the Compartment are listed:	Euro: from 0 to 100% of net assets Others: 0% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone : 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international bond securities.

The aforementioned equities will be bonds chosen on the basis of criteria:

- Of eligibility, in particular:

o Senior debt,

o Fixed maturity,

o Maximum residual maturity,

o Minimum issuing amount,

o Requirement of a minimal threshold in S&P rating or equivalent.

- Of diversification, in particular:

o Issuer (application of ratios applicable to the eligible assets of an UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),

o Geographical area,

o Sector.

For more information on the abovementioned eligibility and diversification criteria, in particular the list of the eligible indices, investors can visit the following Internet site: www.lyxoretf.com.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the Internet site www.lyxoretf.com. The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid Internet site.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the securities held as assets by the Compartment (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

Any counterparty chosen by the Compartment as counterparty to a contract on future financial instruments should be a first class financial institution authorised for matched principal trading.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

- Interest rate risk

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably be affected by yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected.

This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment equities on a place of listing can be affected by any suspension that could notably be due to:

- Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

- Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

- The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

- A market maker's violation of the rules applicable to this marketplace, and/or

- A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's management company and the FFI's counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Index. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Risk related to low diversification

Since the Benchmark indicator to which investors are exposed represents a given region, sector or strategy it may provide less diversification of assets in comparison with a broader index that is exposed to several regions, sectors or strategies. The exposure to an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to obtain an exposure upwards or downwards to performance of corporate floating-rate bonds, denominated in euros.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment period is 3 years.

Information: This fiscal year has an exceptional term of 9 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux - France.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 16 December 2014.*
- *Compartment creation date: 7 January 2015.*

Activity report

The net asset value of the C-EUR unit of the LYXOR UCITS ETF BARCLAYS FLOATING RATE EURO 0-7Y Compartment shows an evolution of -0.03%* between the 07/01/2015 and 30/10/2015 and stands at EUR 99.9698 on 30/10/2015, meaning a fund performance of -0.03% since inception.

The fund replicates the performance of the Barclays Euro Corp FRN 0-7Y En index, listed in euro (EUR) and is representative of the performance of corporate floating-rate bonds nominated in euros and having a residual maturity of less than 7 years.

This index has shown an evolution of 0.11% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the Barclays Euro Corp FRN 0-7Y En index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Barclays Euro Corp FRN 0-7Y En index.

The equities held as assets by the Compartment will notably be equities that make up the Barclays Euro Corp FRN 0-7Y En index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 2 given its exposure to the Benchmark Index.

There is no Tracking Error because the fund was launched less than a year ago. The level of the tracking error for the period was of 0.08%.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

appendix

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

As indicated in our presentation note on the ANC, the terminology and distribution of the CIU heading on the asset side of the balance sheet have been modified as follows, and can be explained in the following terms:

- The sub-heading "UCITS and general purpose Investment funds intended for non-professionals and equivalent from other countries" corresponds with the former Sub-heading "Coordinated European UCITS and French general purpose UCITS".
- The sub-heading "Other Funds intended for non-professionals and equivalents from other European Union Member States" corresponds with the former sub-heading "UCITS reserved for certain investors – FCPR – FCIMT".
- The sub-heading "General purpose professional funds and equivalents from other European Union Member States and listed securitisation entities" corresponds with the former sub-heading "listed Investment funds and SPV".
- The sub-heading "Other Professional investment funds and equivalents from other European Union Member States and non-listed securitisation entities" corresponds with the former sub-heading "non-listed Investment funds and SPV".
- The sub-heading "Other non-European institutions" was introduced as a result of Regulation n° 2014-01.

Information: This fiscal year has an exceptional term of 9 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

appendix

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the responsibility of the management company.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the responsibility of the management company.
- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.165% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euro.

Other operations	129 900 000,00	-	-	-	-

3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items
This breakdown is given for the main listing or assessment currencies, with the exception of the currency in which the accounting is maintained.

By main currency	-	-	-	Other currencies
Assets				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
Liabilities				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
Off-balance sheet	-	-	-	-
Hedging				
Other operations	-	-	-	-

3.5 Receivables and Debts: breakdown by type
Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

Receivables	
Future currency exchange operations:	**5 673 482,56**
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Deferred settlement sales	4 390 183,25
Account receivable	1 283 299,31
-	-
-	-
-	-
Other operations	-
Debts	
Future currency exchange operations	**5 684 125,00**
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Deferred settlement purchases	4 820 655,92
Account payable	852 826,64
Accrued expenses	10 642,44
-	-
-	-
Other operations	-

3.6 Shareholders' equity

		Subscriptions		**Redemptions**
Number of equities issued/redeemed during the fiscal year:	Number of equities	Amount	Number of equities	Amount
EQUITY C-EUR / FR0012386696	1 502 000	150 570 597,60	203 000	20 360 649,30

Commissions acquired by the Compartment by equity category:		Amount		Amount
EQUITY C-EUR / FR0012386696				

3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	**%**
Equity category:	
EQUITY C-EUR / FR0012386696	**0,08**

Performance commissions (variable fees): amount of costs for the fiscal year	**Amount**
Equity category:	
EQUITY C-EUR / FR0012386696	**-**
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

3.8 Commitments given and received

3.8.1	Description of guarantees received by the Compartment with indication of the capital guarantees	**None**
3.8.2	Description of the other commitments received and/or given	**None**

3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (mutual fund) and UCITS managed by these entities:	
	- CIU securities	-
	- Swaps	**-298 741,42**

3.10 Allocation of the earnings table *(in the Compartment's currency of account)*

3.12 Table of the earnings and other characteristic elements of the Compartment during the last 5 fiscal years
Compartment creation date: 7 January 2015.

Currency					
EUR	**30.10.2015**	-	-	-	-
Net assets	**129 860 774,96**	-	-	-	-

EQUITY C-EUR / FR0012386696		Currency of the equity and of the NAV: EUR			
	30.10.2015	-	-	-	-
Number of circulating equities	**1 299 000**	-	-	-	-
Net asset value	**99,9698**	-	-	-	-
Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)*	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) [(1)]	**-**	-	-	-	-
Unit capitalisation *	**2,77**	-	-	-	-

** The amounts of the distribution per unit, the unit capitalisation and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.*
(1) In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt instruments listed in euros.

The LYXOR ULTRA LONG DURATION EURO GOVT FTSE MTS 25+Y UCITS ETF (DR) Compartment (the "Compartment") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index Compartment.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to reproduce, downwards and upwards, the evolution of the "FTSE MTS Eurozone Government Bond IG 25Y+ (Mid Price) Index" (the "Benchmark Indicator" hereafter), listed in euros and consisting of securities with a maturity of over 25 years, and the Compartment of the FTSE MTS Eurozone Government Bond investment Grade All Maturity Index, which is a "Total Return" index composed of securities issued by eurozone member governments and weighted by issuer country.

The anticipated level of the ex-post tracking error under normal market conditions is 0.02%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator "FTSE MTS Eurozone Government Bond IG 25Y+ (Mid Price) Index (Bloomberg Code: FMMPI25R)" is listed in euro. The Benchmark Indicator is composed of securities that are issued by eurozone member country governments and have a maturity of over 25 years. The Benchmark Indicator has been calculated in real-time by FTSE MTS.

The eligible universe of FTSE MTS indices consists of the securities with the following criteria:

(i) nominal and fixed coupons listed in euros which does not include option nor any convertibility with a maturity greater than or equal to 1 year;

(ii) issued by the sovereign governments of a eurozone country, selected by FTSE MTS from the following list of countries as having at least two ratings in the category "Investment Grade" issued by the rating agencies Standard & Poor's, Moody's and Fitch: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Portugal, Slovenia and Spain;

(iii) with at least €2 billion of issued equities;

(iv) listed on the MTS markets.

The methodology of the FTSE MTS indices is supervised by an independent consulting committee consisting of bond and issuer specialists. The Benchmark Indicator is revised monthly.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: http://www.ftse.com/.

These characteristics ensure that FTSE MTS indices are highly liquid and representative of the performance of sovereign bonds. The tracked performance is based on the 5.30 pm (Paris time) fixing of the Benchmark Indicator as determined by FTSE MTS.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator's components are available at the following Internet site: http://www.ftse.com/.

The Benchmark Indicator fixing price is provide daily by Reuters and Bloomberg. Reuters code: FMMPI25R=

Bloomberg code: FMMPI25R

The Benchmark Indicator's closing price is available on the Internet site: www.ftse.com/.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised monthly.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.ftse.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities guaranteed or issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the Compartment is managed:	Between 12 and 40
Currencies in which securities held by the Compartment are listed:	Euro: 100% of net assets Others: from 0 to 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone : 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international bond securities.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the financial manager by delegation, or a company with which it is linked.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the Compartment uses temporary sales of securities, it must receive guarantees in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received non-cash guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including liquidity, short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment in the event of temporary securities transactions. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

(a) Deposited in an authorised institution

(d) Invested in high-quality government bonds

(c) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the Compartment is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

(d) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Interest rate risk

The price of a bond is affected by changes in interest rates. The price of most bonds increases when interest rates decline and decreases when interest rates rise. Bonds with relatively long maturities (which is the case of those in the Benchmark Indicator) are more sensitive to changes in interest rates and are therefore more volatile investments than bonds with shorter maturities.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the equities of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use Future Financial Instrument (FFI) on an ancillary basis.

In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's management company and the counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed. If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the eurozone member states governments bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is greater than 3 years.

Information: This fiscal year has an exceptional term of 8 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 13 February 2015.*
- *Compartment creation date: 2 March 2015.*

Activity report

The net asset value of the C-EUR unit of the LYXOR ULTRA LONG DURATION EURO GOVT FTSE MTS 25+Y UCITS ETF (DR) Compartment shows an evolution of -4.68%* between 02/03/2015 and 30/10/2015 and stands at EUR 95.3185 on 30/10/2015, meaning a fund performance of -4.68% since inception.

The fund replicates the performance of the FTSE EMTS Mid Eurozone Gov Bond IG 25Y index, listed in euros (EUR), is composed of securities that are issued by eurozone member states governments and have a maturity of over 25 years.

This index has shown an evolution of -5.16% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the FTSE EMTS Mid Eurozone Gov Bond IG 25Y index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the FTSE EMTS Mid Eurozone Gov Bond IG 25Y index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

There is no Tracking Error because the fund was launched less than a year ago. The level of the tracking error for the period was of 0.02%.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

Information: This fiscal year has an exceptional term of 8 months.

appendix

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.

In the event of holding an EMTN, it will be assessed on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

appendix

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

[(1)] In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

[(2)] The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 2 March 2015.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

Bonds and other debt instruments listed in euros.

The LYXOR ULTRA LONG DURATION LOWEST RATED IG EURO GOVT UCITS ETF (DR) Compartment (the "Compartment") is continuously exposed to rate securities listed in euros. The exposure to the equity risk does not exceed 10% of the net assets.

The Compartment is an UCITS ETF type index Compartment.

Terms of determination and allocation of amounts available for distribution:

C-EUR equities classes: Capitalisation of all the amounts available for distribution.

Management objective:

The Compartment's management objective is to reproduce, downwards and upwards, the evolution of the "FTSE MTS Lowest Rated Eurozone Government Bond IG 25Y+ Index" (the "Benchmark Indicator" hereafter). This involves gaining exposure to eurozone member states governments securities having a maturity of over 25 years and which are of "investment grade" quality but do not have the highest credit rating, while minimizing the tracking error between the fund and the index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.02%.

Benchmark indicator:

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator "FTSE MTS Lowest Rated Eurozone Government Bond IG 25Y+ Index" (Bloomberg Code: FMMPIXQR), (the "Benchmark Indicator" hereafter) is listed in euro.

The Benchmark Indicator (the "Benchmark Indicator" hereafter) is composed of securities having a maturity of over 25 years and which are of "investment grade" quality but do not have the highest credit rating. It is a "Total Return" Benchmark Indicator composed of securities issued by eurozone member states governments and weighted by country.

The Benchmark Indicator has been calculated in real-time by FTSE MTS.

The eligible universe of FTSE MTS indices (which include the "Benchmark Indicator") consists of the securities with the following criteria:

(i) nominal and fixed coupons listed in euros which does not include option nor any convertibility with a maturity greater than or equal to 1 year;

(ii) issued by the sovereign governments of a eurozone country, selected by FTSE MTS from the following list of countries as having at least two ratings in the category "Investment Grade" issued by the rating agencies Standard & Poor's, Moody's and Fitch: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Portugal, Slovenia and Spain;

(iii) with at least €2 billion of issued equities;

(iv) listed on the MTS markets.

The bonds that compose the Benchmark Indicator must have at least two ratings from the three main credit-rating agencies that are in the "investment Grade" category but are less than the highest possible rating.

The methodology of the FTSE MTS indices is supervised by an independent consulting committee consisting of bond and issuer specialists. The Benchmark Indicator is revised monthly.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: http://www.ftse.com/.

These characteristics ensure that FTSE MTS indices are highly liquid and representative of the performance of sovereign bonds. The tracked performance is based on the 5.30 pm (Paris time) fixing of the Benchmark Indicator as determined by FTSE MTS.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator's components are available at the following Internet site: http://www.ftse.com/.

The Benchmark Indicator fixing price is provide daily by Reuters and Bloomberg. Reuters code: FMMPIXQR

Bloomberg code: FMMPIXQR=

The Benchmark Indicator's closing price is available on the Internet site: www.ftse.com/.

Benchmark Indicator revision and composition

The Benchmark Indicator is revised monthly.

The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available at the following Internet site: www.ftse.com

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that it will invest mainly in the Benchmark Indicator's constituents.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website at www.lyxoretf.com. The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities guaranteed or issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the Compartment is managed:	Between 12 and 40
Currencies in which securities held by the Compartment are listed:	Euro: 100% of net assets Others: from 0 to 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone : 100% of net assets Emerging countries: 0% of net assets

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international bond securities.

Investment in the assets of Collective Investment Undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net asset. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the financial manager by delegation, or a company with which it is linked.

3. Off-balance sheet assets (derivative instruments)

On an ancillary basis, the Compartment may engage in transactions involving derivatives traded on a regulated market or over the counter.

With respect to derivatives traded over-the-counter, in accordance with its best-execution policy the management company considers that Société Générale would be the counterparty that would generally provide the best possible execution for any hedging transactions the Compartment may enter into pursuant to its investment strategy. Accordingly, all or some of these derivatives (including index-linked swaps) may be traded with Société Générale without having to seek a competitive bid from another counterparty.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

For this purpose the management company may appoint an intermediary (hereinafter the "Agent) to provide the following services in connection with the Compartment's temporary securities transactions. If such an Agent is used it may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

These operating costs, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent and/or other intermediaries that are involved in these transactions.

These direct and indirect operating costs will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating expenses and on the entities to which these expenses are paid will be provided in the Compartment's annual report.

All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs do not increase the Compartment's overall operating expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

8. Financial guarantees

When the Compartment lends or otherwise temporarily disposes of securities it must receive guarantees in the form of securities and/or cash to reduce the counterparty risk associated with these transactions.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received non-cash guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the MF may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the MF's assets. In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(vii) Liquid assets or equivalents, notably including liquidity, short-term bank assets and money market instruments;

(viii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(ix) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(x) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(xi) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(xii) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment in the event of temporary securities transactions. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

An additional discount may be applied to collateral received in another currency than the euro.

Reinvestment of received guarantees:

Non-cash collateral will not be sold, reinvested or pledged.

At the manager's discretion, cash collateral may either be:

(i) Deposited in an authorised institution

(ii) Invested in high-quality government bonds

(ii) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the Compartment is able to withdraw the total amount of its cash collateral and the accrued interest at any time.

(iv) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

Risk profile:

The shareholder's money will primarily be invested in financial instruments selected by the financial management delegatee. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Interest rate risk

The price of a bond is affected by changes in interest rates. The price of most bonds increases when interest rates decline and decreases when interest rates rise. Bonds with relatively long maturities (which is the case of those in the Benchmark Indicator) are more sensitive to changes in interest rates and are therefore more volatile investments than bonds with shorter maturities.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Credit risk

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Risk arising from a lack of perfect replication

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the equities of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

vi) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

vii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

viii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

ix) A market maker's violation of the rules applicable to this marketplace, and/or

x) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment may use Future Financial Instrument (FFI) on an ancillary basis.

In such a case, the Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter. In compliance with the UCITS regulations, the counterparty risk cannot exceed 10% of the total value of the Compartment's assets by counterparty.

When Société Générale is involved as a counterparty of the FFIs and/or a temporary securities transaction, conflicts of interest can arise between the Compartment's management company and the counterparty. The management company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk arising from temporary securities transactions

If a borrower of securities defaults on its obligation there could be a risk that the value of the guarantee received by the Compartment is less than the value of the securities lent. This risk could arise, for example, in the event of (i) an inaccurate valuation of the securities lent and/or (ii) unfavourable market movements and/or (iii) the lowering of the credit rating(s) of the issuer(s) of securities taken as guarantee and/or (iv) the illiquidity of the market in which the guarantees received are listed. If cash guarantees are reinvested this could (i) result in leverage that entails a risk of loss and volatility and/or (ii) expose the Compartment to a market that is inappropriate for its investment objective, and/or (iii) generate less income than the amount of guarantees the Compartment must repay. The Compartment could also fail to receive the securities lent by the date specified, which would diminish its capacity to accommodate investor redemptions.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or its FFI's counterparty), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

Eligible subscribers and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure, downwards and upwards, to the performance of the eurozone member states governments bonds segment.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, your cash requirements at present and for three years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also recommended that you sufficiently diversify your investments so as not to be exposed solely to the risks of this Compartment.

Investors are therefore recommended to study their individual situations with their usual wealth management advisers. The minimum recommended investment period is greater than 3 years.

Information: This fiscal year has an exceptional term of 7 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 March 2015.*
- *Compartment creation date: 26 March 2015.*

Activity report

The net asset value of the C-EUR unit of the LYXOR ULTRA LONG DURATION LOWEST RATED IG EURO GOVT UCITS ETF (DR) Compartment shows an evolution of -8.04%* between 26/03/2015 and 30/10/2015 and stands at EUR 91.9629 on 30/10/2015, meaning a fund performance of -8.04% since inception.

The fund replicates the performance of the FTSE MTS Lowest-Rated Govt IG index, listed in euros (EUR), is composed of securities issued by eurozone member states governments and having a maturity of over 25 years.

This index has shown an evolution of -7.97% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the FTSE MTS Lowest-Rated Govt IG Y index, the MF will use a direct replication method, which means that the MF will invest mainly in a basket of balance sheet assets made of securities making up the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the FTSE MTS Lowest-Rated Govt IG index, the MF may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (FFI). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the MF's tracking error.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

The basket of securities held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will aim to make the market value of the aforementioned future swap less than or equal to zero, which will ensure that the counterparty risk arising from the swap will be fully neutralized.

There is no Tracking Error because the fund was launched less than a year ago. The level of the tracking error for the period was of 0.02%.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

Information: This fiscal year has an exceptional term of 8 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value.

Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

appendix

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

appendix

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the financial management delegatee.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	**Basis**	**Schedule, rate**
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	Maximum 0.165% per year
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in euros.

Compartments / feeder	LYXOR MSCI NORTH AMERICA UCITS ETF is a compartment of the MULTI UNITS FRANCE mutual fund
Financial manager by delegation	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
Depository	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
Statutory auditors	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the LYXOR MSCI NORTH AMERICA UCITS ETF Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-EUR: Capitalisation of all the amounts available for distribution.

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Equities C-USD: Capitalisation of all the amounts available for distribution.

Equities D-USD: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the "MSCI North America Net Total Return" index (Bloomberg code: NDDUNA) (the "Benchmark Indicator" hereafter), listed in USD and representative of the equity market performance of large-cap and mid-cap listed companies in the United States and Canada.

The anticipated level of the ex-post tracking error under normal market conditions is 0.05%.

Benchmark indicator:

The Benchmark indicator is the MSCI North America Net Total Return index, listed in USD (the "Benchmark Indicator").

The Benchmark Indicator is a Net Dividends Reinvested Index, which includes the returns of index components, including dividends and other distributions, in the calculation of the index's performance.

The Benchmark Indicator represents the performance of large-cap and mid-cap listed companies in the United States and Canada. With 726 components, the Benchmark Indicator represents approximately 85% of the free-float adjusted market capitalisation of the U.S. and Canadian stock markets.

The Benchmark Indicator is calculated by MSCI Inc.

The Benchmark Indicator is designed to measure the performance of large and medium capitalisation listed companies in the United States and Canada and is weighted by free-float adjusted market capitalisation.

The Benchmark Indicator is based on the MSCI Global Investable Market Indices (GIMI) methodology, which provides a consistent, overall method for constructing global or regional benchmark indices, for listed companies of all sizes and in all economic sectors and for all investment styles.

This methodology aims to encompass all investment opportunities, while ensuring the Benchmark Indicator's liquidity, investability and replicability. These three criteria are assessed using two indicators: the annual traded value ratio (ATVR) of the securities, which is their monthly median trading volume divided by their free float, and the 3-month trading frequency.

The Benchmark Indicator is rebalanced quarterly, in February, May, August and November.

Benchmark Indicator revision and composition

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by MSCI Inc and available on the Internet site: http://www.msci.com. The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code:.dMINA00000NUS Bloomberg code: M1NA Index

The Benchmark Indicator's closing price is available on the Internet site: http://www.msci.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including the small capitalisation markets. The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),
- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of future financial instrument ("FFI") traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the Benchmark Indicator followed by the compartment.

- Exchange risk linked to the C-EUR and D-EUR (EUR/USD) equity classes

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the Benchmark Indicator. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed to the equity market of large-cap and mid-cap listed companies in the United States and Canada.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

Information: This fiscal year has an exceptional term of 7 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 10 March 2015.*
- *Compartment creation date: 26 March 2015.*

Activity report

The net asset value of the unit C-USD of the LYXOR MSCI NORTH AMERICA UCITS ETF Compartment shows an evolution of -0.40%* between the 07/04/2015 and 30/10/2015 and stands at USD 99.6001 on 30/10/2015, resulting in the fund's performance being equal to -0.40% since inception.

The fund replicates the performance of the MSCI North America NR index, listed in US dollars (USD), representative of the equity market performance of large-cap and mid-cap listed companies in the United States and Canada.

This index has shown an evolution of -0.43% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the MSCI AC ASIA exJP/CS NR index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the MSCI AC ASIA exJP/CS NR index.

The equities held as assets by the Compartment will notably be equities that make up the MSCI AC ASIA exJP/CS NR index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 6 given its exposure to the Benchmark Index.

There is no Tracking Error because the fund was launched less than a year ago. The level of the tracking error for the period was of 0.05%.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

Information: This fiscal year has an exceptional term of 7 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2003-02 of the Comité de la Réglementation Comptable dated 2 October 2003 relative to the chart of accounts of CIU (1st part).

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.
In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

appendix

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

appendix

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.20% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in USD.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.
- Future change: None.

Indication of other changes declared to each of the bearers individually *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

Indication and justification of the changes to estimates and application provisions

None.

Indication of the nature of the errors corrected during the fiscal year

None.

Indication of the rights and conditions attached to each category of equities

Equities C-EUR: Capitalisation of all the amounts available for distribution.

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Equities C-USD: Capitalisation of all the amounts available for distribution.

Equities D-USD: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

INFORMATION ON THE INVESTMENTS AND MANAGEMENT

Classification:

International equities.

At least 60% of the LYXOR FTSE USA MINIMUM VARIANCE UCITS ETF Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

Terms of determination and allocation of amounts available for distribution:

Equities C-USD: Capitalisation of all the amounts available for distribution.

Equities D-USD: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Equities C-EUR: Capitalisation of all the amounts available for distribution.

Equities D-EUR: The management company reserves the right to capitalise and/or distribute all or part of the result, one or more times each year. The realised net capital gain will be capitalised.

Management objective:

The Compartment's management objective is to replicate, downwards and upwards, the evolution of the "FTSE USA Minimum Variance Index" (the "Benchmark Indicator" hereafter), listed in USD.

This provides exposure to public companies listed in the United States of America while minimizing volatility and tracking error between the Compartment and the Benchmark Indicator. Volatility is optimized by selecting the least volatile and least correlated of the Benchmark Indicator stocks, as determined by applying quantitative criteria to historical data.

The anticipated level of the ex-post tracking error under normal market conditions is 0.08%.

Benchmark indicator:

The Benchmark Indicator is the "FTSE USA Minimum Variance Index". The Benchmark Indicator is listed in USD and is a "Total Return" index, which means that all coupons from the Benchmark Indicator components are reinvested in the Benchmark Indicator.

The Benchmark Indicator is composed of the equities of public companies listed in the United States that meet FTSE's eligibility criteria. The weighting of the Benchmark Indicator components, which is based on historical share price performance, was designed to minimize the Benchmark Indicator's volatility.

The Benchmark Indicator's investment universe is composed of securities that meet the following criteria:

(i) the issuer must be incorporated in the U.S.A. and the issuer's stock must be listed exclusively in that country, or the FTSE Nationality Advisory Committee considers the security to be a U.S.A. stock;

(ii) only common stock ordinary shares listed on an eligible exchange;

(iii) liquidity free float and foreign ownership criteria.

The Benchmark Indicator methodology is supervised by an advisory committee composed of experienced market professionals. The Benchmark Indicator's composition is revised twice a year.

A full description and the complete methodology used to construct the Benchmark Indicator and information on the composition and respective weightings of the Benchmark Indicator components are available on the Internet site: http://ftse.com/.

The performance tracked is that of the Benchmark Indicator's closing price as determined by FTSE on the basis of the WM/Reuters Spot Rates™ at 4.00 pm GMT.

Benchmark Indicator revision and composition

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are published by FTSE and available on the Internet site: http://www.ftse.com. The rebalancing frequency indicated above does not affect the cost of implementing the Investment Strategy.

Benchmark Indicator publication

The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is also calculated in real-time on each trading day. The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

Reuters code: .TRIWIUSAMVN Bloomberg code: WIUSAMVN

The Benchmark Indicator's closing price is available on the Internet site: http://www.ftse.com.

Investment strategy:

1. Strategy employed

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The equities held as assets by the Compartment will notably be equities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equities of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

2. Balance sheet assets (excluding integrated derivatives)

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including the small capitalisation markets. The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - Subordination to the main market indices or to the Benchmark Indicator,
  - Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
  - Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent),

- of diversification, notably:
  - Issuer (application of ratios applicable to the eligible assets of a CIU, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - Geographical area,
  - Sector.

The investment on collective investment undertakings ("CIU") that comply with Directive 2009/65/EC is limited to 10% of the net assets. As part of these investments, the Compartment can subscribe to units or equities of CIU managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

3. Off-balance sheet assets (derivative instruments)

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be negotiated with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

4. Securities with integrated derivatives

None.

5. Deposits

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

6. Cash borrowing

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

7. Temporary securities acquisition and sale operations

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

8. Financial guarantees

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

The manager is prohibited from receiving cash guarantees.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

(a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;

(b) They must be valued at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;

(c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;

(e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

(i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;

(ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;

(iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;

(iv) Equities or units issued by CIU investing primarily in bonds/equities as indicated in points (v) and (vi) below;

(v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

Policy related to discounts:

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;

- Maturity of the asset received as guarantee (if applicable);

- Rating of the issuer of the asset received as guarantee (if applicable).

Reinvestment of received guarantees:

Received financial guarantees will not be sold, reinvested or pledged.

Risk profile:

The bearer's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

- Equity risk

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

- Capital loss risk

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

- Liquidity risk (primary market)

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the index, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

- Liquidity risk on a place of listing

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

iv) A market maker's violation of the rules applicable to this marketplace, and/or

v) A failure of this marketplace's IT or electronic systems.

- Counterparty risk

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of future financial instrument ("FFI") traded over-the-counter with Société Générale or with any other counterparty.

In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

In case of a Counterparty's default, the contract relating to FFIs can be terminated early. The Compartment will then make every effort to achieve its management objective by signing, if relevant, another contract relating to FFIs with a third party counterparty, under the market conditions prevailing at the time of the occurrence of this event.

The realisation of this risk can notably have impacts on the Compartment's ability to achieve its management objective, in particular the replication of the Benchmark Indicator.

When Société Générale is involved as a counterparty of the FFIs, conflicts of interest can arise between the Compartment's Management Company and the FFI's counterparty. The Management Company manages these conflict of interest risks by setting up procedures intended to identify and limit them, and to ensure their equitable resolution, if relevant.

- Risk of investing in small and mid-cap companies

Le Compartment is exposed to small and medium capitalisation companies and more specifically to the equity securities of small and medium companies and intermediate sized companies (ISC), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment's net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

- Risk that the management objective may only be partially reached

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

- Risk related to the use of derivative instruments

In order to reach its investment objective, the Compartment uses future financial instrument ("FFI") negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

- Risk related to a change of the tax regime

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

- Risk related to a change of the tax regime affecting the underlyings

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

- Risk related to regulations

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

- Risk related to the regulations applicable to the underlyings

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

- Risk related to events affecting the Benchmark Indicator

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.
If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,

ii) The Benchmark Indicator is definitively discontinued by its supplier,

iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,

vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

- Securities transaction risk

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

- Exchange risk linked to the Benchmark Indicator

The compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the Benchmark Indicator followed by the compartment.

- Model risk

The Benchmark Indicator's Minimum Variance methodology includes an algorithm for optimizing variance with constraints. In some cases, this algorithm may not provide the best possible variance and the risk profil may differ from that of the initial investment universe, i.e. FTSE USA.

Subscribers concerned and typical investor profile:

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to be exposed to the market of public companies listed in the United States that meet FTSE's eligibility criteria.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

Information: This fiscal year has an exceptional term of 4 months.

For more details, the complete prospectus can be obtained by requesting it from the management company.

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 21 May 2015.*
- *Compartment creation date: 15 June 2015.*

Activity report

The net asset value of the unit C-USD of the LYXOR FTSE USA MINIMUM VARIANCE UCITS ETF Compartment shows an evolution of 0.36%* between the 15/06/2015 and 30/10/2015 and stands at USD 100.3629 on 30/10/2015, resulting in the fund's performance being equal to 0.36% since inception.

The fund replicates the performance of the FTSE USA Min Var Net index, listed in US dollars (USD) and provides exposure to public companies listed in the United States of America while minimizing volatility and tracking error between the Compartment and the Benchmark Indicator. Volatility is optimized by selecting the least volatile and least correlated of the Benchmark Indicator stocks, as determined by applying quantitative criteria to historical data.

This index has shown an evolution of 0.36% over the fiscal year.

This gap between the annual performance of the CIU and that of its Benchmark Index can be explained by the result of the various parameters listed below:

- The operating and management fees as well as the external management fees payable to the management company,

- The costs for accessing the local markets of the securities of the replicated indexing,

- The costs or gains related to the instruments used as part of the replication of the indexing.

In pursuit of the greatest possible correlation with the performance of the FTSE USA Min Var Net index, the compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the FTSE USA Min Var Net index.

The equities held as assets by the Compartment will notably be equities that make up the M FTSE USA Min Var Net index, as well as other European equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The fund's risk and yield profile has been classed as category 5 given its exposure to the Benchmark Index.

There is no Tracking Error because the fund was launched less than a year ago. The level of the tracking error for the period was of 0.05%.

The counterparty for the Index Linked Swap obtained by the fund is: Société Générale.

** The figures referring to past performance relate to past periods and are not a reliable indicator of future results.*

Regulatory information

Transfer commission *(not audited by the auditor)*

None.

Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

ESG criteria

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the Compartment does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy.

1. Accounting rules and methods

The annual accounts are presented in the form required by Regulation ANC 2014-01 that repealed the amended CRC Regulation 2003-02. This regulation includes the new AIFM classification for CIUs, but does not modify the applicable accounting principles nor the assessment methods for assets and liabilities.

Information: This fiscal year has an exceptional term of 4 months.

Assessment rules

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Comité de la Réglementation Comptable dated 14 January 2014 relative to the chart of accounts of open-end CIU.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. They are presented in the off-balance sheet on the basis of the nominal value defined in the contract.
In the event of the holding of an EMTN, it will be valued on the basis of a market price given by the financial instrument's counterparty.

The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of CIU operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of CIU operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

appendix

Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

Posting method for the trading fees

The chosen method is that of included fees.

Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

appendix

Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Management fees and external management fees payable to the portfolio management company (CAC, Depository, distribution, lawyers) including tax (1)	Net assets	maximum 0.20% per year including tax
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in CIU.

Accounting currency

The Compartment's accounting is carried out in USD.

Indication of accountancy changes declared to each of the bearers individually

- Occurred change: None.

Distribution per unit on capital gains and losses (including advances)	**-**	-	-	-	-
Distribution per unit (including advances)*	**-**	-	-	-	-
Unit tax credit transferred to unit holders (natural persons) (1)	**-**	-	-	-	-
Unit capitalisation *	**33,87**	-	-	-	-

** The amounts of the distribution per unit, the unit capitalisation and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.*
(1) In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

4. Inventory
